# **Academic Program and Course Description Guide**

**2024**

## **Introduction:**

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

## **Concepts and terminology:**

**Academic Program Description:** The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

**Course Description:** Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

**Program Vision:** An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

**Program Mission:** Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

**Program Objectives:** They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

**Curriculum Structure:** All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

**Learning Outcomes:** A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

**Teaching and learning strategies:** They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

## Academic Program Description Form

**University Name:** Misan University

**Faculty/Institute:** College of Education

**Scientific Department:** Mathematics

**Academic or Professional Program Name:** Bachelor of Mathematics Education

**Final Certificate Name:** Bachelor of Mathematics

**Academic System:** Annual

**Description Preparation Date:** 2023– 2024

**File Completion Date:** 2024

**Signature:**

**Head of Department Name:**

**Date:**

**Signature:**

**Scientific Associate Name:**

**Date:**

**The file is checked by:**

**Department of Quality Assurance and University Performance**

**Director of the Quality Assurance and University Performance Department:**

**Date:**

**Signature:**

**Approval of the Dean**

**1. Program Vision**

Achieving distinguished outcomes in the educational and research fields to keep pace with scientific development and enrich society cognitively.

## 2. Program Mission

Preparing educational scientific cadres capable of competing in the labor market and possessing research and scientific skills in the field of mathematical sciences.

## 3. Program Objectives

- 1) Preparing educational scientific cadres who possess educational skills to teach mathematics.
- 2) Meeting the labor market's need for teachers in mathematics.
- 3) Keeping up with scientific progress in the field of mathematics and its applications.
- 4) Providing students with the necessary skills to deal with any scientific problem in a logical manner and solve it in a scientific manner.

## 4. Program Accreditation

Does the program have program accreditation? And from which agency?

## 5. Other external influences

Is there a sponsor for the program?

Ministry of Higher Education and Scientific Research/University of Misan.

## 6. Program Structure

Program Structure	Number of Courses	Credit hours	Percentage	Reviews*
Institution Requirements	9	15	%9.2	Basic
College Requirements	9	36	%22.08	Basic
Department Requirements	19	112	%68.71	Basic
Summer Training	Nothing			
Other				

\* This can include notes whether the course is basic or optional.

## 7. Program Description

Year/Level	Course	Course Name	Credit Hours
------------	--------	-------------	--------------

	Code		theoretical	practical

### 8. Expected learning outcomes of the program

<b>Knowledge</b>	
Learning Outcomes 1	Learning Outcomes Statement 1
<b>Skills</b>	
Learning Outcomes 2	Learning Outcomes Statement 2
Learning Outcomes 3	Learning Outcomes Statement 3
<b>Ethics</b>	
Learning Outcomes 4	Learning Outcomes Statement 4
Learning Outcomes 5	Learning Outcomes Statement 5

### 9. Teaching and Learning Strategies

Teaching and learning strategies and methods adopted in the implementation of the program in general.

### 10. Evaluation methods

Implemented at all stages of the program in general.

### 11. Faculty

#### Faculty Members

Academic Rank	Specialization		Special Requirements/Skills (if applicable)	Number of the teaching staff	
	General	Special		Staff	Lecturer

--	--	--	--	--	--	--

<b>Professional Development</b>
<b>Mentoring new faculty members</b>
Briefly describes the process used to mentor new, visiting, full-time, and part-time faculty at the institution and department level.
<b>Professional development of faculty members</b>
Briefly describe the academic and professional development plan and arrangements for faculty such as teaching and learning strategies, assessment of learning outcomes, professional development, etc.

<b>12. Acceptance Criterion</b>
<b>(Setting regulations related to enrollment in the college or institute, whether central admission or others)</b>

<b>13. The most important sources of information about the program</b>
State briefly the sources of information about the program.

<b>14. Program Development Plan</b>

Program Skills Outline															
				Required program Learning outcomes											
Year/Level	Course Code	Course Name	Basic or optional	Knowledge				Skills				Ethics			
				A1	A2	A3	A4	B1	B2	B3	B4	C1	C2	C3	C4

- Please tick the boxes corresponding to the individual program learning outcomes under evaluation.

# **Study Materials for** **The 1<sup>st</sup> Stage**

## Course Description **Calculus**

<b>1. Course Name:</b>	Calculus
<b>2. Semester / Year:</b>	Annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*150 hours, (5 hours per week *30 per week) ( 8 units)
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Assistant prof.D. Ala' Najim Abdullah Email: mr.ala_najim@uomisan.edu.iq
<b>7. Course Objectives</b>	

<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>* Students' understanding of the three conic sections (equivalent, plus, and minus), how to draw them, identify everything they contain (vertices, foci, and axes), and show all changes to them in the event of changing the center, dragging, or rotating each of them.</li> <li>* An expanded and complementary study of the first stage regarding vectors and parametric equations.</li> <li>* Expanding students' understanding regarding the subject of the function with one variable, its purpose and continuity, finding the derivative using the geometric method, and studying the applications of the derivative.</li> <li>* Study and understand integrals, methods of solving them, and applications of integration.</li> <li>* Introducing students to the concept of some functions, such as trigonometric functions and their inverses, as well as exponential and logarithmic functions.</li> </ul>
--------------------------	--

<b>8. Teaching and Learning Strategies</b>	
<b>Strategy</b>	<ul style="list-style-type: none"> <li>* In-person lectures in classrooms.</li> <li>* Discussion method, surprise exams, and methods of refining skills.</li> <li>* Asking intellectual questions or holding a competition between students, stimulating creative thinking and answering clearly and quickly to the problems presented.</li> </ul>

### 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
5 weeks	25 hours	The student will be able to understand the given material,	conic sections (their equations/drawing)	In person lectures	Semester and daily in-person exams.
6 weeks	20 hours	The student will be able to understand the given material	understand the subject of the function its purpose, and continuity	In person lectures	Semester and daily in-person exams.
8 weeks	30 hours	The student will be able to understand the given material	Derivatives, their applications, and the use of Rolle's theorem and the mean value	In person lectures	Semester and daily in-person exams.
5 weeks	20 hours	The student will be able to understand the given material	Trigonometric functions and their inverses, exponential and logarithmic functions	In person lectures	Semester and daily in-person exams.
6 weeks	30 hours	The student will be able to understand the given material	Function integrals with a variable, methods for solving them, and their most important	In person lectures	Semester and daily in-person exams.

	applications
<b>10. Course Evaluation</b>	
Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports .... etc	
<b>11. Learning and Teaching Resources</b>	
Required textbooks (curricular books, if any)	توماس كالكوليس المقرر / 2011
Main references (sources)	توماس كالكوليس الاصدار 2014
Recommended books and references (scientific journals, reports...)	Advanced Calculus a geometric View “James J. Callahan, 2010. Calculus A Complete Course, ninth edition ”Robert A. Adams”

## Course Description **Fundamentals of mathematics**

<b>1. Course Name:</b>	<b>fundamentals of mathematics</b>
<b>2. Semester / Year:</b>	Annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*120 hours, (4 hours per week *30 per week) <b>6 units</b>
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Lecture Taghreed Abdulkareem hatim Email: <a href="mailto:mr.tagrid@uomisan.edu.iq">mr.tagrid@uomisan.edu.iq</a>
<b>7. Course Objectives</b>	
<b>Course Objectives</b>	<p><b>*The student acquires the concept of expressions, mathematical logic, and ways to deal with them algebraically.</b></p> <p><b>*Explaining the concept of sets, relationships, functions, the links between them, and the theories related to them.</b></p>
<b>8. Teaching and Learning Strategies</b>	
<b>Strategy</b>	<p>First: Cognitive objectives</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Gaining the ability and skill to recognize and deal with mathematical phrases and sentences.</li> <li><input type="checkbox"/> Acquire the skill of distinguishing between relationships and functions and linking them.</li> <li><input type="checkbox"/> Gain experience in dealing with groups and operations on them</li> <li><input type="checkbox"/> Gain knowledge of the basics of group algebra</li> </ul> <p>Second: Course-specific skills.</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Enabling the student to write scientific reports</li> <li><input type="checkbox"/> Preparing the student's intellectual structure for reading research organized by the concepts of logic, groups, and functions.</li> </ul> <p>10. Teaching and learning methods</p>

- Daily and weekly tests.
  - Exercises and activities in the classroom.
  - Guiding and directing students to sources that include examples and exercises related to the prescribed vocabulary.
11. Student evaluation methods:
- Direct questions about daily topics in the classroom
  - Provide activities
  - Semester and final tests and activities
12. General objectives of the course:
- Developing the student's ability to work on performing assignments and submitting them on the scheduled date.
  - Trying to apply concepts by solving different types of exercises.
  - Developing the student's ability to dialogue and discuss.
13. Skills related to employ ability and personal development:
- Developing the student's ability to deal with technical means.
  - Developing the student's ability to deal with paper and electronic resources.
  - Developing the student's ability to deal with multimedia.
  - Developing the student's ability to dialogue and discuss.

## 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1week	4 hours	The set of natural, integer, rational, irrational, real, and complex numbers.  divisibility.  Belonging, subset, sets equality.	Sets of numbers	In person lectures	Semester and daily in-person exams.
4weeks	16hours	Statements, types of statements, logical connectives, logical laws and properties of logical connectives. Absolutely correct statements, contradiction.  Open sentences, quantifies (partial quantifies + full quantifies(	Mathematical logic	In person lectures	Semester and daily in-person exams.

2weeks	8 hours	Logical Conclusion, mathematical proof, proof methods: direct proof, indirect proof (positive opposite + contradiction.)	Mathematical proof	In person lectures	Semester and daily in-person exams.
3Weeks	12 hours	Operations on sets (union, intersection, difference, symmetric difference),	Set theory	In person lectures	Semester and daily in-person exams.
3Weeks	12 hours	Family of sets, family of indexed sets, operations on family of sets.  Power set, partition, cover set, finite cover set	Family of groups	In person lectures	Semester and daily in-person exams.
2weeks	12 hours	Ordered pairs, examples of equality of ordered pairs, Cartesian product between two sets, operations on Cartesian product, generalization of Cartesian product.	Cartesian product	In person lectures	Semester and daily in-person exams.
3Weeks	12 hours	The concept of relation, examples, operations on the relation, types of relation	Relation	In person lectures	Semester and daily in-person exams.
3Weeks	12 hours	Equivalence classes, quotient set, parity classes in $Z$ , set of integers from the norm $n$ .	division set	In person lectures	Semester and daily in-person exams.
3Weeks	12 hours	Partial ordering relation, comparability, total ordering relation, partially ordered sets, totally ordered sets .	Ordered sets	In person lectures	Semester and daily in-person exams.
3Weeks	12 hours	Function, examples of important functions, types of functions, composes of functions, inverse	function	In person lectures	Semester and daily in-person exams.

		of the function.			
2Weeks	8 hours	The concept of group, examples of groups, some characteristics of groups, subgroups.	group	In person lectures	Semester and daily in-person exams.

### 10. Course Evaluation

- \* Semi-daily and monthly tests and surprise exams.
- \* Intensive assignments on curriculum topics.
- \* Writing reports on course vocabulary.

### 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Introduction to the foundation of mathematics, Wildel R. ,2 nd 1965, New York.
Main references (sources)	اسس الرياضيات، هادي جابر مصطفى واخرون الجزئين، الاول والثاني 1983 جامعة البصرة، العراق.
Recommended books and references (scientific journals, reports...)	❖ مقدمة في أسس الرياضيات، عادل غسان نعوم وباسل عطا الهاشمي , 2000 , جامعة بغداد - العراق
Electronic References, Websites	المواقع الالكترونية الرصينة، ومواقع المكتبات في بعض الجامعات العالمية.

## Course Description **Linear algebra**

<b>1. Course Name:</b>	Linear algebra
<b>2. Semester / Year:</b>	Annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*120 hours, (4 hours per week *30 per week) <b>6 units</b>
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Assistant lecture Murtadha Ali Shabeeb Email: murtadha.ali@uomisan.edu.iq
<b>7. Course Objectives</b>	

<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>* Acquire mathematical knowledge of the prescribed subjects and understand sufficient meanings behind each concept</li> <li>* Developing understanding to enable the student to recognize the concepts of linear algebra and how to apply them in solving mathematical problems</li> </ul>
--------------------------	---

### 8. Teaching and Learning Strategies

<b>Strategy</b>	<ul style="list-style-type: none"> <li>* In-person lectures in classrooms.</li> <li>* Discussion method, surprise exams, and methods of refining skills.</li> <li>* Asking intellectual questions or holding a competition between students, stimulating creative thinking and answering clearly and quickly to the problems presented.</li> </ul>
-----------------	--

### 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1-4	16 hours	Types of matrices and operations on	matrices	In person lectures	Semester and daily in-person exams.
7-5	16hours	Find the determinants of matrices and some of their properties	Matrix determinants	In person lectures	Semester and daily in-person exams.
11-8	16hours	Finding the inverse of matrices and some of their properties	Inverse of matrices	In person lectures	Semester and daily in-person exams.
15-12	16hours	Methods for solving systems of linear equations.	Systems of linear equations	In person lectures	Semester and daily in-person exams.
20-16	20hours	Vectors and some operations on them - vector space and subspaces - linear combination - linear independence	vector space	In person lectures	Semester and daily in-person exams.
25-21	20hours	Linear transformations with some examples and properties - The kernel and form of the linear transformation	Linear transformations	In person lectures	Semester and daily in-person exams.
30-26	20hours	Eigenvalues and	Eigenvalues and	In person	Semester and

	eigenvectors - Eigenvalues and eigenvectors of a linear operator - Internal product of vector space	eigenvectors	lectures	daily in-person exams.
--	---	--------------	----------	------------------------

## 10. Course Evaluation

- \* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- \* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

## 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	توماس كالكولس المقرر / 2011
Main references (sources)	توماس كالكولس الاصدار 2014
Recommended books and references (scientific journals, reports...)	<p>Linear Algebra, Kenneth Hoffman Ray -1 Kanze.</p> <p>2- Linear Algebra, Seymour Lipschutz and -2 Marc Lipson.</p> <p>Topics in Algebra, Wiley, I.N.Herstein.</p>

## Course Description Form **computer**

<b>1. Course Name:</b>	computer
<b>2. Semester / Year:</b>	Annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*30 hours, (one hours per week *30 per week) ( two units)
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: lecture e-mail :
<b>7. Course Objectives</b>	
<b>Course Objectives</b>	<p>A- Training students on Windows 10</p> <p>B - To qualify and train students on the Word program to write research and scientific papers in the future.</p> <p>T - Students can arrange PowerPoint slides and present their research or reports in them in the future.</p> <p>C- Learn to create electronic spreadsheets through Excel.</p> <p>D- Study the types of networks and how to use the Internet in the future</p>
<b>8. Teaching and Learning Strategies</b>	
<b>Strategy</b>	<p>A- Cognitive objectives</p> <ol style="list-style-type: none"> <li>1) Knowing the concept of electronic computer, its types and classifications</li> <li>2) The student's knowledge of the Windows 10 operating system</li> <li>3) The student's knowledge and application of the Word program</li> <li>4) The student's knowledge and application of the PowerPoint program.</li> <li>5) The student's knowledge and application of the Excel program.</li> <li>6) Introducing the student to networks, their types and benefits.</li> </ol> <p>B - The skills objectives of the course</p> <ol style="list-style-type: none"> <li>1) Teaching students how to use a computer.</li> <li>2) Teach students how to use the Windows 10 operating system.</li> <li>3) Providing students with how to use Microsoft Office programs.</li> <li>4) Students acquire the skill of activating and using email.</li> </ol> <p>.10 Teaching and learning methods</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> In-person lectures</li> <li><input type="checkbox"/> Discussion style.</li> <li><input type="checkbox"/> Supportive and explanatory videos for in-person lectures.</li> </ul> <p>11 Evaluation methods</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Daily Quiz and monthly attendance tests</li> <li><input type="checkbox"/> Assigning the student to academic tasks for which he will be rewarded</li> <li><input type="checkbox"/> Assigning the student to prepare reports on computer application topics</li> <li><input type="checkbox"/> The method of discussion and dialogue between the student and the teacher</li> <li><input type="checkbox"/> Observation method</li> </ul> <p>- 12 General objectives:</p>

- 1) The student should show interest in the explanation the teacher provides of the subject.
  - 2) The student must have sufficient conviction about the importance of the material he is receiving.
  - 3) That the student will be able to use and organize the data he received after explaining the material in the future
  - 4) The student should be able to discuss and suggest some other possible solutions to the problem.
- 12 General objectives:
- 1) The student should show interest in the explanation the teacher provides of the subject.
  - 2) The student must have sufficient conviction about the importance of the material he is receiving.
  - 3) That the student will be able to use and organize the data he received after explaining the material in the future
  - 4) The student should be able to discuss and suggest some other possible solutions to the problem.

## 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4weeks	8 hours	The student learns about Topics described in the unit name	Learn the operating system Windows 10	In person lectures	Semester and daily in-person exams.
10weeks	10 hours	the student gets to know	Learning Word	In person lectures	Semester and daily in-person exams.
7weeks	14 hours	the student gets to know Topics described in the unit name	Learning PowerPoint,	In person lectures	Semester and daily in-person exams.
7weeks	14 hours	the student gets to know Topics described in the unit name	Learning Excel,	In person lectures	Semester and daily in-person exams.
2weeks	4hours	The student gets to know	Online learning	In person lectures	Semester and daily in-person exams.

## 10. Course Evaluation

\* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.

## 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	nothing
Main references (sources)	<p>1- دروس في مبادئ الحاسب الآلي تأليف د. أحمد عبد السلام البراوي 2010.</p> <p>2- تعلم مايكروسفت وورد وبوربوينت واكسل 2013 أعداد الدكتور خالد فرهود 2314.</p> <p>3- كتاب ويندوز لرئيس المهندسين : محمد مالك محمد</p> <p>4- كتاب اكسل لرئيس المهندسين : محمد مالك محمد</p> <p>كتاب وورد لرئيس المهندسين : محمد مالك محمد</p>

12. Course development plan	
:We suggest adding the following topics	
-1A brief overview of Windows 11	

## Course Description Form **physics**

1. Course Name:	physics
2. Semester / Year:	Annual
3. Description Preparation Date:	2023-2024
4. Available Attendance Forms:	Lectures are delivered to students in person according to the schedule announced in the department
5. Number of Credit Hours (Total) / Number of Units (Total)	* 60hours, (2 hours per week *30 per week) 4 units
6. Course administrator's name (mention all, if more than one name)	Name: Email:
7. Course Objectives	
Course Objectives	<input type="checkbox"/> *Explaining the basics of mechanical physics and the properties of matter to the student. <input type="checkbox"/> *Enabling the student to solve various physics problems. <input type="checkbox"/> *Enables him to master the use of the laws of motion in a straight line and the fall of free bodies, and to find the laws of displacement and velocity in a logical and sound manner. <input type="checkbox"/> *Deriving and finding scientific explanations for physical equations from Newton's laws. <input type="checkbox"/> *Distinguish between types of friction and the factors affecting them. <input type="checkbox"/> *Apply the laws of work, energy and torque correctly. Defining flexibility, stress and flexibility and finding a mathematical relationship between them.
8. Teaching and Learning Strategies	
Strategy	A- Cognitive objectives

- 1) The student remembers the information and laws given in the course.
- 2) That the student understands the course topics and the mathematical problems related to them.
- 3) The student must be able to apply what he has learned.
- 4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.
- 5) The student composes problems related to the course topics and then arrives at their correct solution.
- 6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.

**B – The skills objectives of the course**

- 1) The student must demonstrate the required mathematical laws related to the course vocabulary.
- 2) The student should use the appropriate laws to solve each problem.
- 3) The student must be proficient in linking topics that can be linked within the course vocabulary.
- 4) The student should distinguish between the laws while solving.

**Teaching and learning methods**

- (1) In-person lectures
- (2) Discussion style.
- (3) Supportive video lectures on the college's YouTube channel.

**Evaluation methods**

1. Daily and monthly tests.
2. Assigning the student to academic tasks for which he will be rewarded
3. Assigning the student to make reports on physics topics.

**General goals:**

- 1) The student should show interest in the explanation the teacher provides of the subject.
- 2) The student must have sufficient conviction about the importance of the material he is receiving.
- 3) That the student is able to organize the data he has to solve problems
- 4) The student should be able to discuss and justify solutions and suggest some other possible solutions to the problem.

**Teaching and learning methods**

1. Teaching using illustrative methods
2. Teaching using competitions, which stimulate the spirit of enthusiasm among students
3. Learning by making the student a teacher to enhance his self-confidence
4. Learning through brainstorming among students

**Evaluation methods**

1. The method of discussion and dialogue between the student and the teacher
2. Observation method
3. Attendance exams.

**D Targeted skills:** 1) Employing the acquired information in the life field

2) Personal development through linking traditional education and e-learning 3) Building the personality of a competent mathematics teacher who can transfer his experiences to the student in the future 4) Preparing the student scientifically and educationally according to solid scientific foundations.

**Determinations**

**Flexibility**

## 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4	2 hours	Acquire knowledge and distinguish between physical quantities	vector –Vector and non quantities	In person lectures	Semester and daily in-person exams.
5	13 hours	Learn about Newton's laws	Movement and its laws/laws III –Newton) I	In person lectures	Semester and daily in-person exams.
5	13 hours	Ability to apply Newton's second law	Newton's second law	In person lectures	Semester and daily in-person exams.
4	2 hours	Defining the force of friction and distinguishing between its types	forces in Frictional physics/its types	In person lectures	Semester and daily in-person exams.
4	2 hours	Study the concept of momentum and momentum and distinguish between them	Collision, thrust and momentum	In person lectures	Semester and daily in-person exams.
4	2 hours	Study the concepts of work and energy and the relationship between them	Work and energy	In person lectures	Semester and daily in-person exams.
2	4 hours	Study the concept of moments	Determinations	In person lectures	Semester and daily in-person exams.
2	4 hours	Study the concept of flexibility	Flexibility	In person lectures	Semester and daily in-person exams.

## 10. Course Evaluation

- \* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- \* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

## 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	لا يوجد كتاب منهجي
Main references (sources)	الفيزياء الجامعية الميكانيك وخواص المادة والحركة الموجية والحرارة تأليف: الدكتور رحيم عبد الكتل، الدكتور عبد السلام عبد الامير عباس، د. طالب ناهي الخفاجي، فياض عبد اللطيف نجم. محاضرات في الفيزياء العامة، الميكانيكا وتطبيقاته، الدكتور حازم سكيك

12. Course development plan	
	1. Adding new vocabulary to the fifth chapter, such as torque, balanced moments, levers and their types, and flexibility. 2. Expanding on old vocabulary, adding examples and problems for each topic.

## Course Description Form **Educational psychology**

<b>1. Course Name:</b>	Educational psychology
<b>2. Semester / Year:</b>	Annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) Number of Units (Total)</b>	* 60 hours, (2 hours per week *30 per week) 4 units
<b>6. Course administrator's name (ment all, if more than one name)</b>	Name: Email:
<b>7. Course Objectives</b>	
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>*Acquire the behavioral knowledge of educational psychology necessary to teach and understand the meanings behind each concept of psychological behaviors.</li> <li>*Developing an understanding of the nature of the subject of educational psychology as an integrated system of basic concepts that will provide an important basis for understanding other psychological specialties.</li> <li>*Applying steps to solve psychological problems by analyzing the problem and developing and implementing a solution plan.</li> </ul>
<b>8. Teaching and Learning Strategies</b>	
<b>Strategy</b>	<p>A- Cognitive objectives</p> <ol style="list-style-type: none"> <li>1) The student remembers the information and diagrams given in the course.</li> <li>2) That the student understands the course topics and the knowledge related to them.</li> <li>3) The student should be able to apply what he has learned to solve behavioral problems.</li> <li>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</li> <li>5) The student composes problems related to the course topics and then arrives at their correct solution.</li> <li>6) The student must have ideas about the course material and know how to devise appropriate solutions to solve it.</li> </ol> <p>B – The skills objectives of the course</p> <ol style="list-style-type: none"> <li>1. The student should use the appropriate laws to solve each problem.</li> <li>2. That the student is good at linking topics that can be linked within the course vocabulary.</li> <li>3. The student should distinguish between the uses of theorems and laws during the solution.</li> </ol> <p>Teaching and learning methods</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> In-person lectures</li> <li><input type="checkbox"/> Discussion style.</li> <li><input type="checkbox"/> Supporting video lectures on the college's YouTube channel.</li> </ul>

Evaluation methods

1. Daily and monthly tests
2. Assigning the student to academic tasks for which he will be rewarded
3. Assigning the student to make reports on educational psychology topics

General goals

- 1) The student should show interest in the explanation the teacher provides of the subject.
- 2) The student must have sufficient conviction about the importance of the material he is receiving.
- 3) That the student is able to organize the data he has to solve the psychological problems he faces.
- 4) The student should be able to discuss and justify solutions to psychological problems and suggest some other possible solutions to the problem.

Teaching and learning methods

- 1) Teaching using discussion and illustrative methods.
- 2) Teaching using competitions, which stimulate the spirit of enthusiasm among students.
- 3) Learning by making the student a teacher to enhance his self-confidence.
- 4) Learning through brainstorming among students.

Evaluation methods

1. The method of discussion and dialogue between the student and the teacher
2. Observation method
3. Attendance exams.

D Targeted skills:

- 1) Employing the acquired information in the life field
- 2) Personal development through linking traditional education and e-learning
- 3) Building the personality of a mathematics teacher who is proficient in dealing with students according to efficient educational and psychological foundations who is able to transfer his experiences to the student.
- 4) Preparing the student scientifically and educationally according to solid scientific foundations.

## 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4 -1	2 hours	The student becomes familiar	<b>Historical development of branches of –psychology psychology</b>	In person lectures	Semester and daily in-person exams.
8 -5	<b>13</b> hours		<b>Characteristics of psychology</b>	In person lectures	Semester and daily in-person exams.
14 -13	<b>13</b> hours		<b>Educational goals</b>	In person lectures	Semester and daily in-person exams.
12 -15	2 hours		<b>Factors affecting the effectiveness of the</b>	In person lectures	Semester and daily in-person exams.

		with the topics described in the name of the unit	<b>educational process (teaching and instruction)</b>		
22 -18	2 hours		<b>Attention and perception</b>	In person lectures	Semester and daily in-person exams.
22 -20	2 hours		<b>Motivation and learning</b>	In person lectures	Semester and daily in-person exams.
03 -22	2hours		<b>Memory and forgetting</b>	In person lectures	Semester and daily in-person exams.

## 10. Course Evaluation

\* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.

\* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

## 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	علم النفس التربوي
Main references (sources)	كتاب علم النفس التربوي للاستاذ الدكتور جعفر عبد الكاظم عبد كتاب علم النفس الحديث للاستاذ الدكتور ليث عياش
Recommended books and references (scientific journals, reports...)	كتاب علم النفس التربوي للاستاذ الدكتور جعفر عبد الكاظم عبد كتاب علم النفس الحديث للاستاذ الدكتور ليث عياش

## 12. Course development plan

1. Some concepts related to the subject of educational psychology were introduced and advanced modern sources and references were used
2. Using modern educational techniques by presenting the material using modern video means through which the student can understand and comprehend the material.
3. Studying educational psychology through field visits that develop psychological and educational concepts for the student.

## Course Description **English**

[9] <b>Course Name:</b>	English
[10] <b>Semester / Year:</b>	Annual
[11] <b>Description Preparation Date:</b>	2023-2024
[12] <b>Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
[13] <b>Number of Credit Hours (Total) / Number of Units (Total)</b>	* 30 hours, (1 hours per week *30 per week) 2 units
[14] <b>Course administrator's name (mention all, if more than one name)</b>	Name: Email:
[15] <b>Course Objectives</b>	
<b>Course Objectives</b>	The course aims to teach and train students to learn educational vocabulary in the English language, conversation, listening, pronunciation of phonemes, and the rules of the English language.
[16] Teaching and Learning Strategies	
<b>Strategy</b>	<p>A- Cognitive objectives:</p> <ol style="list-style-type: none"> <li>1) Teaching educational, scientific and social vocabulary.</li> <li>2) Understanding how to structure sentences in English.</li> <li>3) Listen and pronounce correctly according to the English language.</li> <li>4) Learn how to connect sentences using conjunctions and punctuation tools.</li> <li>5) How to formulate questions and answer them.</li> <li>6) Changing verbs from one time to another.</li> </ol> <p>B – The skills objectives of the course</p> <ol style="list-style-type: none"> <li>1) The skill of writing the English language according to its letters.</li> <li>2) The skill of listening to the phonetic units of a word.</li> <li>3) The skill of pronouncing words according to the phonemes in English.</li> <li>4) The skill of conversation between the student and his colleague, the student and the professor, and the student and others.</li> </ol> <p>Teaching and learning methods</p> <ol style="list-style-type: none"> <li>a) In-person lectures, discussion method.</li> <li>b) Supportive video lectures on the teacher's YouTube channel (Google Classroom)</li> </ol> <p>Evaluation methods</p> <ol style="list-style-type: none"> <li>1. Daily Quiz and monthly attendance tests.</li> <li>2. Assigning the student to academic tasks for which he will be rewarded</li> <li>3. Assigning the student to make reports on topics related to the curriculum vocabulary.</li> </ol> <p>General goals:</p> <ol style="list-style-type: none"> <li>1) That the student shows interest in the explanation provided by the teacher for the subject. 2)</li> </ol>

That the student possesses sufficient conviction about the importance of the subject he is receiving.

3) That the student is able to organize the information he has to form a topic of speech.

4) The student should be able to discuss and speak with his colleagues in English confidently and fluently.

Teaching and learning methods

1. Teaching using educational, explanatory and discussion methods
2. Teaching using competitions, which stimulate the spirit of enthusiasm among students
3. Learning by making the student a teacher to enhance his self-confidence
4. Learning through brainstorming among students.

Evaluation methods

1. The method of discussion and dialogue between the student and the teacher.
2. Observation method.
3. Attendance exams.

D Targeted skills: 1) Employing the acquired information in the life field

- 2) Personal development through linking traditional education and e-learning
- 3) Building the personality of a competent teacher who is able to speak the English language and use it to enhance the academic material and transfer his experiences to the student in the future.
- 4) Preparing the student scientifically and educationally according to solid scientific foundations.

### [17] Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
2 + 1	4 hours	Students learn to perform actions accurately	Greetings - actions	Conversation	the exam
4 + 3	4 hours	The student learned the names of countries and their landmarks	Names of countries - landmarks	Dialogue and discussion	Oral
6 + 5	4 hours	Actions - negation and affirmation	Things about humans	Conversation	the exam
8 + 7	4 hours	Pronouns and their meaning	Family and friends	Conversation	Oral
11 + 9	4 hours	Food, drinks, sports	way of living	Conversation	Writing and dialogue
12 + 11	4 hours	Time, place and numbers	Everyday life	Conversation	Oral and written examination
14 + 13	4 hours	Question words, adjectives	Favorites	Dialogue and discussion	Oral and written examination
16 + 15	4 hours	The room, the	Place of residence and	Link the picture to the word	Oral and written examination

		furniture, the places	living		
18 + 17	4 hours	Years, months, days	Past tenses	Conversation	Oral and written examination
21 + 19	4 hours	Sports, shopping	Free times/holidays	Conversation	Oral and written examination
22+ 21	4 hours	Denial and affirmation	Possibility of work	Conversation	Oral and written examination
24 + 23	4 hours	Preferring one action over another	Please and thanks	Conversation	Oral and written examination
26 + 25	4 hours	Linking color to clothing	Here and now	Conversation	Oral and written examination
28 + 27	4 hours	Future, grammar vocabulary	it's time to go	Dialogue and discussion	Oral and written examination
31 + 29	4 hours	Overall familiarization with the subject matter	Units and their discussion	Interrogation	Oral and written examination

### [18] Course Evaluation

\* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.

\* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

### [19] Learning and Teaching Resources

Required textbooks (curricular books, if any)	New Headway Plus / Beginner Student's Book New Headway Plus / Beginner Workbook With Key
Main references (sources)	a) Dictionary b) Oxford English Dictionary The Urban Dictionary c) <a href="https://www.oxfordlearnersdictionaries.com/">https://www.oxfordlearnersdictionaries.com/</a> <a href="https://dictionary.cambridge.org/dictionary/english/treasure">https://dictionary.cambridge.org/dictionary/english/treasure</a>
Recommended books and references (scientific journals, reports...)	Short story
Electronic References, Websites	

### 12. Course development plan

\*Adding grammar and reading books specifically for teaching the English language.

\*Inducting students into audio laboratories and urging them to pronounce the correct words for all curriculum items.

\*Introducing some mathematical vocabulary, translating and writing research articles in the field of mathematics in English as a type of extracurricular activity.

\* Adding oral dialogues between students by presenting topics by the professor and dividing the students into

groups that dialogue among themselves to strengthen and enhance the students' vocabulary..

## Course Description **Arabic**

[20] <b>Course Name:</b>	<b>Arabic</b>
[21] <b>Semester / Year:</b>	Annual
[22] <b>Description Preparation Date:</b>	2023-2024
[23] <b>Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
[24] <b>Number of Credit Hours (Total) / Number of Units (Total)</b>	* 60 hours, (2 hours per week *30 per week) 4 units
[25] <b>Course administrator's name (mention all, if more than one name)</b>	Name: Email:
[26] <b>Course Objectives</b>	
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>- Qualifying students to make them able to use the Arabic language correctly so that they have a sound language.</li> <li>- It qualifies them to stand in front of students and speak in front of them, avoiding as many linguistic errors as possible that obstruct their teaching work in secondary schools.</li> <li>- By familiarizing them with a certain amount of Arabic grammatical, linguistic and orthographic vocabulary.</li> <li>- As well as studying some Qur'anic, poetic and prose texts in order to become acquainted with solid linguistic methods..</li> </ul>
[27] Teaching and Learning Strategies	
<b>Strategy</b>	<p>A- Cognitive objectives</p> <p>1) Familiarity with the rules of the Arabic language 2) Familiarity with the rules of Arabic spelling 3) Familiarity with the rules of Arabic morphology 4) Familiarity with the style of the Holy Qur'an by studying some texts 5) Getting to know the styles of Arabic poetry 6) Getting to know some texts of Arabic prose A7- Preparing him in a manner that qualifies him to work in educational institutions.</p> <p>B - Skills objectives for the course: 1) Speaking fluently B2 - Read texts carefully B3 - Listening to speakers and knowing what is true and false in speech. 4) Scrutinizing linguistic styles and distinguishing what is useful.</p> <p>Teaching and learning methods</p> <p><input type="checkbox"/> In-person lectures <input type="checkbox"/> Discussion style. <input type="checkbox"/> Supporting video lectures on the college's YouTube channel.</p> <p>Evaluation methods</p> <p><input type="checkbox"/> Daily exams <input type="checkbox"/> Daily reports, annual research, quarterly exams and final exam.</p>

<p>General goals</p> <p>1) Appreciating the greatness of the Creator, Glory be to Him, in the composition of the Qur'an through His miracles. 2) Appreciating the efforts of scholars in studying the Qur'anic texts. 3) Appreciating the efforts of researchers and scholars in establishing the rules of the Arabic language.</p> <p>4) Appreciating the efforts of scholars in promoting love for the Arabic language and their contribution to it, and correcting it and freeing it from the defects that may flaw it.</p> <p>Teaching and learning methods</p> <p>1. Teaching using electronic illustrative means</p> <p>2-Discussion style</p> <p>3-Preparing daily reports</p> <p>4- Preparing research</p> <p>Evaluation methods</p> <p>1-Daily exams</p> <p>2-Daily reports and annual research</p> <p>3-Semester exams</p> <p>4- Final exam</p> <p>D Targeted skills: D1- Extracting grammatical evidence according to the topics studied.</p> <p>2) Composing eloquent sentences free of linguistic errors.</p> <p>D0- Citing Qur'anic, poetic, and prose evidence in representing the topics.</p> <p>4) Knowledge of the rules of the Arabic language and the original and subsidiary parsing marks.4) Preparing the student scientifically and educationally according to solid scientific foundations.</p>
--

### [28] Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4-3-2-1	8 hours	That the student understands what he receives in the lecture	The nominal sentence is the subject and the predicate	Lectures And discussion hall inside the	Daily and monthly exams
8-7-6-5	8 hours	That the student understands what he learned in the lecture	The annulants of the beginning were Kan and its sisters, that and its sisters, not the negation of gender	Lectures And discussion inside the hall	Daily and monthly exams
-11-9 12-11	8 hours	That the student understands what he receives in the lecture	Selections from Quranic texts	Lectures And discussion inside the hall	Daily and monthly exams
-14-13 16-15	8 hours	That the student understands what he receives in the lecture	A Qur'anic text from Surat Al-Kahf, a study of a story included in the text, Surat Al-Kahf, and a study of two stories included in the text	Lectures And discussion inside the hall	Daily and monthly exams
-18-17 21-19	8 hours	That the student understands what he	Selections from poetic texts by Ain Al-	Lectures And discussion inside the hall	Daily and monthly exams

		receives in the lecture	Qushayri Nouniya Al-Mutanabbi		
22-21	4 hours	That the student understands what he receives in the lecture	Selections from Arabic prose, text of “The Breastfeeders” by Taha Hussein	Lectures And discussion inside the hall	Daily and monthly exams
-24-23 26-25	8 hours	That the student understands what he receives in the lecture	Phrasal Verb Past Tense Present Tense Imperative Verb	Lectures And discussion inside the hall	Daily and monthly exams
30-27	8 hours	That the student understands what he receives in the lecture	The subject and the object	Link the picture to the word	Oral and written examination

### [29] Course Evaluation

\* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.

\* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

### [30] Learning and Teaching Resources

Required textbooks (curricular books, if any)	Lectures in the Arabic language
Main references (sources)	language Lectures in the Arabic Texts from the Holy Quran Poetic texts from the collections of poets, Ibn Fiyah, Ibn -Aqeel’s commentary on Al Malik, the collector of Arabic lessons The curriculum in grammar and parsing
Recommended books and references (scientific journals, reports...)	شرح ابن عقيل على ألفية ابن مالك.
Electronic References, Websites	التطبيق النحوي / عبده الراجحي

### 12. Course development plan

-The subject of numbers in the Holy Qur’an and their meanings.

- Expanding on the topic of linguistic errors.

- Distinguishing between the letter H and the letter T.

## Course Description **human rights**

[31] <b>Course Name:</b>	<b>human rights</b>
[32] <b>Semester / Year:</b>	Annual
[33] <b>Description Preparation Date:</b>	2023-2024
[34] <b>Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
[35] <b>Number of Credit Hours (Total) / Number of Units (Total)</b>	* 30 hours, (1 hours per week *30 per week) 2 units

<b>[36] Course administrator's name (mention all, if more than one name)</b>	Name: Email:
<b>[37] Course Objectives</b>	
<b>Course Objectives</b>	<p>For the student to become familiar with the principles of human rights, democracy, and public freedoms.  The student will be familiar with the articles of the Universal Declaration of Human Rights issued by the United Nations in 1842.  For the student to become familiar with the Iraqi constitutions and what they include regarding the human rights of the Iraqi people.  The student gets to know the constitutional, judicial and political guarantees.  For the student to know the nature of democracy, its types, and the nature of public freedoms, their types and controls.  The student gets to know the democratic practice of election and nomination and the rights and duties associated with it.</p>
<b>[38] Teaching and Learning Strategies</b>	
<b>Strategy</b>	<p>A- Cognitive objectives.</p> <ol style="list-style-type: none"> <li>1) Understanding the opinions of scholars, philosophers, and writers on the subject of human rights</li> <li>2) Getting to know the Universal Declaration of Human Rights and international and regional human rights conventions. A0- Increasing the student's scientific and cultural knowledge</li> <li>4) The student's knowledge of the developments taking place in the field of human rights, democracy, and freedom. 5) The student's knowledge of the areas of real application of principles and laws in modern human societies.</li> </ol> <p>B - Skills objectives for the course:</p> <ol style="list-style-type: none"> <li>1) Giving the student a deeper awareness and understanding of human rights issues</li> <li>2) Giving the student an in-depth awareness of his community's issues and an understanding of societal problems for the purpose of searching for solutions.</li> <li>3) Stimulate independent thinking and research and build the skills necessary to live as an active citizen in a democratic life.</li> </ol> <p>Teaching and learning methods</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> In-person lectures</li> <li><input type="checkbox"/> Discussion style.</li> <li><input type="checkbox"/> Video lectures on the college's YouTube channel.</li> </ul> <p>Evaluation methods</p> <ol style="list-style-type: none"> <li>1. Daily and monthly tests</li> <li>2. Assigning the student to academic tasks for which he will be rewarded</li> <li>3. Assigning the student to make reports on human rights topics.</li> </ol> <p>General goals</p> <ol style="list-style-type: none"> <li>1) Developing the student's ability to develop critical and analytical thinking to identify the negative aspects of ideas and principles and try to find new solutions and ideas for the true application of human rights and democracy.</li> <li>2) Developing the student's ability to work collectively to serve the public interest and to consolidate the culture of human rights and democracy.</li> </ol> <p>Teaching and learning methods</p>

□Teaching using discussion and auxiliary illustrative methods  
 □Education using competitions, as it works to stimulate the spirit of enthusiasm among students.  
 Education to enhance the student's self-confidence.  
 Evaluation methods  
 1. The method of discussion and dialogue between the student and the teacher.  
 2. Observation method.  
 3. Daily and monthly examinations.  
 D Targeted skills: 1) Utilizing acquired information in the field of life in a way that enhances human rights 2) Personal development through linking traditional education and e-learning D0-  
 Building the student's ability to interact collectively through cooperative learning 4) Preparing the student scientifically and educationally according to foundations and principles human rights

### [39] Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	1 hours	Developing cognitive understanding	Human rights in ancient civilizations	Lecture and discussion	general questions
2	1 hours	Developing cognitive understanding	Human rights in religions and divine laws	Lecture and discussion	General questions and discussion
3	1 hours	Developing cognitive understanding	Human rights in Islam (the reign of Imam Ali (peace be upon him) to his governor in Egypt, Malik al-Ashtar)	Lecture and discussion	General questions and discussion
4	1 hours	Developing cognitive understanding	Human rights in the Middle Ages	Lecture and discussion	the exams
5	1 hours	Developing cognitive understanding	Human rights in modern times	Lecture and discussion	General questions and discussion
6	1 hours	Developing cognitive understanding	Human rights in thought, revolutions, and modern legislation	Lecture and discussion	General questions and discussion
7	1 hours	Developing cognitive understanding	Political ideas and theories	Lecture and discussion	the exams
8	1 hours	Developing cognitive understanding	Revolutions and legislation	Lecture and discussion	General questions and discussion
9	1 hours	Developing cognitive understanding	Contemporary recognition of human rights	Lecture and discussion	General questions and discussion
10	1 hours	Developing	International and regional	Lecture	Discussion in daily

		cognitive understanding	recognition	and discussion	preparation
11	1 hours	Developing cognitive understanding	Non-governmental organizations and human rights	Lecture and discussion	the exams
12	1 hours	Developing cognitive understanding	Human rights in international conventions	Lecture and discussion	General questions and discussion
13	1 hours	Developing cognitive understanding	Universal Declaration of Human Rights	Lecture and discussion	Discussion in daily preparation
14	1 hours	Developing cognitive understanding	The two international covenants on human rights	Lecture and discussion	General questions and discussion
15	1 hours	Developing cognitive understanding	Regional and national conventions	Lecture and discussion	General questions and discussion
16	1 hours	Developing cognitive understanding	First semester exam	Lecture and discussion	the exams
17	1 hours	Developing cognitive understanding	Individual and collective human rights	Lecture and discussion	General questions and discussion
18	1 hours	Developing cognitive understanding	Human Rights Generations	Lecture and discussion	General questions and discussion
19	1 hours	Developing cognitive understanding	The generation of civil and political rights and the generation of economic, social and cultural rights	Lecture and discussion	General questions and discussion
20	1 hours	Developing cognitive understanding	Generation of universal rights (the right to development / the right to a clean environment / the right to peace)	Lecture and discussion	Discussion in daily preparation
21	1 hours	Developing cognitive understanding	Threats facing the new generation of human rights (terrorism).	Lecture and discussion	the exams
22	1 hours	Developing cognitive understanding	– Administrative corruption – Human trafficking – Intellectual property)	Lecture and discussion	General questions and discussion
23	1 hours	Developing cognitive understanding	Rights guarantees	Lecture and discussion	Discussion in daily preparation
24	1 hours	Developing cognitive understanding	Human constitutional, judicial and political	Lecture and discussion	General questions and discussion

25	1 hours	Developing cognitive understanding	Human rights and democracy	Lecture and discussion	the exams
26	1 hours	Developing cognitive understanding	The concept of democracy and freedom	Lecture and discussion	Discussion in daily preparation
27	1 hours	Developing cognitive understanding	History, characteristics and advantages of democracy	Lecture and discussion	General questions and discussion
28	1 hours	Developing cognitive understanding	Types of democracy / direct democracy	Lecture and discussion	Tests
29	1 hours	Developing cognitive understanding	Semi-direct democracy -	Lecture and discussion	Research discussion
30	1 hours	Developing cognitive understanding	Representative democracy	Lecture and discussion	Research discussion

#### [40] Course Evaluation

- \* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- \* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

#### [41] Learning and Teaching Resources

Required textbooks (curricular books, if any)	<b>Not found</b>
Main references (sources)	كتاب د. رياض عزيز هادي، حقوق الانسان، كلية العلوم 5002 السياسية، جامعة بغداد،
Recommended books and references (scientific journals, reports...)	<b>Written lectures by the subject teacher based on some relevant sources, human rights basic concepts, human rights in the .Western religious heritage and Islam</b>
Electronic References, Websites	<b><a href="https://t.me/political92">https://t.me/political92</a> <a href="https://books-library.net">https://books-library.net</a> <a href="https://www.neelwafurat.com">https://www.neelwafurat.com</a></b>

#### 12. Course development plan

- Domestic violence and its effects on Iraqi society
- 2- Adding the topic of electronic crimes and their impact on society, what are their causes, and how they are treated
- 3- Adding the topic of drugs and their impact on society, the CEDAW agreement, Islamic law, and extremism in societies, causes and treatments.

<b>12.Course Name:</b>	<b>Foundations of Education</b>
<b>13.Semester / Year:</b>	Annual
<b>14.Description Preparation Date:</b>	2023-2024
<b>15.Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>16.Number of Credit Hours (Total) / Number of Units (Total)</b>	*60 hours, (2 hours per week *30 per week) <b>4 units</b>
<b>17.Course administrator's name (mention all, if more than one name)</b>	
<b>18.Course Objectives</b>	

<b>Course Objectives</b>	<ol style="list-style-type: none"> <li>1. Introducing students to the basis of cultural education in society and the role of education in daily life.</li> <li>2. How to employ this knowledge to serve society in the fields of education.</li> <li>3. It makes students of colleges of education feel the value of ancient civilizations that played a prominent role in progress Societies, with an explanation of the role of thinkers and philosophers in serving societies and the impact of this in building an educated generation that respects people and serves humanity at various levels.</li> <li>4. Informing students about our educational heritage and working in a way that serves people at the present time, especially the teacher and student, and benefiting from the lessons and lessons of the past.</li> </ol>
--------------------------	---

### 19. Teaching and Learning Strategies

<b>Strategy</b>	<p><b>First: Cognitive objectives</b></p> <ol style="list-style-type: none"> <li>1) That the student knows education and the concept of education, ancient and modern.</li> <li>2) The student should explain the role of civilizations from Mesopotamia and Chinese civilization to Greek civilization.</li> <li>3) For the student to explain the role of scholars and philosophers of educational thought among Arabs and Muslims and Western thinkers.</li> <li>4) The student should explain the most important educational opinions that played a major role in the advancement of education</li> </ol> <p><b>The skills objectives of the course</b></p> <ol style="list-style-type: none"> <li>1) That the student acquires knowledge of the true basis of education and the possibility of benefiting from this history full of cognitive progress.</li> <li>2) That the student acquires knowledge of the philosophers and thinkers of Islamic civilization and an explanation of their role in life, which prompts students to be proud of their past, which constitutes a major motivation for them to be creative in all educational fields</li> </ol> <p><b>General goals:</b></p> <ol style="list-style-type: none"> <li>1) The student should show interest in the explanation the teacher provides of the subject. 2) The student must have sufficient conviction about the importance of the material he is receiving. 3) The student should be able to discuss topics related to the subject. 4) The student compares the fields of education in societies.</li> <li>5) - The student evaluates the fields of education and its foundations.</li> </ol>
-----------------	--

### 20. Course Structure

<b>Week</b>	<b>Hours</b>	<b>Required Learning Outcomes</b>	<b>Unit or subject name</b>	<b>Learning method</b>	<b>Evaluation method</b>
1+2+3+4 weeks	2*4=8 hours	Gaining knowledge in understanding the cultural basis of the concept of education	Lecture on the concept Education in the past and in the present - the emergence and development of the	In person lectures	Semester and daily in-person exams.

			concept of education throughout history - the philosophical basis of education _Education and ancient civilizations		
Weeks 7+6+5 8+	<b>2*4=8</b> hours	likewise	Education in Mesopotamia civilization _Education in Chinese civilization _Greek education _Spartan education	In person lectures	Semester and daily in-person exams.
9+10+1 1+12 weeks	<b>2*4=8</b>	likewise	The positive role of education in building civilizations _Education and Islamic civilization _Arabic education before Islam _Arab Islamic education	In person lectures	Semester and daily in-person exams.
Weeks 13+14+ 15+16	<b>2*4=8</b> hours	likewise	_ The role of Islamic institutions and libraries in advancing the educational process _The role of Islam in spreading science and knowledge _Features of Arab-Islamic education First semester exam	In person lectures	Semester and daily in-person exams.
+18+17 20+19 weeks	<b>2*4=8</b>	likewise	mam Al-Ghazali - Philosophers and thinkers of Western educational thought - Jean-Jacques Rousseau _Pestalozzi	In person lectures	Semester and daily in-person exams.
+22+21 24+23 weeks	<b>2*4=8</b>	likewise	Makarenko _ Educational opinions of Ibn Khaldun _ Educational opinions of Ibn Sina _The educational opinions of Al-Ghazali	In person lectures	Semester and daily in-person exams.
25+26+ 27+28+ 29+30 weeks	<b>2*4=8</b>	likewise	Moral education - patterns of moral education - moral education in Arab-Islamic thought Modern educational theories include: Technological theory, social cognitive theory, Islamic educational theory. -Educational renewal in Iraq: comprehensive school, distinguished schools, acceleration	In person lectures	Semester and daily in-person exams.

## 21. Course Evaluation

- \* Semi-daily and monthly tests and surprise exams.
- \* Intensive assignments on curriculum topics.
- \* Writing reports on course vocabulary.

## 22. Learning and Teaching Resources

Required textbooks (curricular books, if any)	. There is no prescribed book
Main references (sources)	<p>The book "Principles of Education" written by Dr. Ahmed Haqqi Al-Hilli and others, Baghdad University Press, 1825 - The book of Islamic educational thought in learning, teaching and guidance, Dr. Laith Karim Hamad, Diyala University 2338 - and reliance was placed on modern sources, including - Fundamentals of Education by Dr. Wael Abdel Rahman Al-Tall 2332 - Traditional, modern and contemporary philosophies of education by Dr. Muhammad Mahmoud Al-Khawaldeh 2310 - Philosophy of Education with Logical Analysis by Richard Stanley and others, translated by Dr. Abdul Aziz Al-Bassam 2331 - Gharib, Abdel Karim (2332) Educational Manhal (Encyclopedic Dictionary of Pedagogical, Didactic, and Psychological Terms and Concepts) Part One. 1st Edition, Casablanca, Morocco, - Bertrand, Y. # **Study Materials for the 2<sup>nd</sup> Stage**

## Course Description Form **Advance Calculus**

<b>1. Course Name:</b>	Advance Calculus				
<b>2. Semester / Year:</b>	Annual				
<b>3. Description Preparation Date:</b>	2023-2024				
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department				
<b>5. Number of Credit Hours (Total) Number of Units (Total)</b>	*150 hours, (5 hours per week *30 per week) 8 units				
<b>6. Course administrator's name (ment all, if more than one name)</b>	Name: Dr. Akeel Abdulwahid Qasim Email: akeelmath@uomisan.edu.iq				
<b>7. Course Objectives</b>					
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>* Students' understanding of the three conic sections (equivalent, plus, and minus), how to draw them, identify everything they contain (vertices, foci, and axes), and show all changes to them in the event of changing the center, dragging, or rotating each of them.</li> <li>* An expanded and complementary study of the first stage regarding vectors and parametric equations.</li> <li>* Expanding students' understanding regarding the subject of the function with one variable, its purpose and continuity, finding the derivative using the geometric method, and studying the applications of the derivative.</li> <li>* Study and understand integrals, methods of solving them, and applications of integration.</li> <li>* Introducing students to the concept of some functions, such as trigonometric functions and their inverses, as well as exponential and logarithmic functions.</li> </ul>				
<b>8. Teaching and Learning Strategies</b>					
<b>Strategy</b>	<ul style="list-style-type: none"> <li>* In-person lectures in classrooms.</li> <li>* Discussion method, surprise exams, and methods of refining skills.</li> <li>* Asking intellectual questions or holding a competition between students, stimulating creative thinking and answering clearly and quickly to the problems presented.</li> </ul>				
<b>9. Course Structure</b>					
Week	Hours	Required earning Outcomes	Unit or subject name	Learning method	Evaluation method
5 weeks	25 hours	The student will be able to understand the given material,	Conic sections (equations /draw it)	In person lectures	Semester and daily in-person exams.
4 weeks	20 hours	The student will be able to understand the given material,	Polar coordinates and their counterparts graphically	In person lectures	Semester and daily in-person exams.
6 weeks	30 hours	The student will be able to understand the given material,	Parametric equations and equipment in plane and space	In person lectures	Semester and daily in-person exams.
4 weeks	20 hours	The student will be able to understand the given material,	Functions in more than one variety and various derivatives	In person lectures	Semester and daily in-person exams.
6 weeks	30 hours	The student will be able to understand the given material,	Integration of doubles and triples in rectangular and stoichiometric regions and in polar coordinates	In person lectures	Semester and daily in-person exams.
5 weeks	25 hours	The student will be able to understand the given material,	Sequences and power series	In person lectures	Semester and daily in-person exams.

<b>10. Course Evaluation</b>	
Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports .... etc

## Course Description Form **Ordinary Differential Equations**

<b>1. Course Name:</b>	Ordinary Differential Equations
<b>2. Semester / Year:</b>	annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*120 hours, (4 hours per week *30 per week) * 180 units, (6 units per week * 30 weeks)
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Mohammed Jabbar Hawas Allami Email: drmjh53@uomisan.edu.iq
<b>7. Course Objectives</b>	
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>• Defining the concept of differential equations, knowing the order of a differential equation and the degree of a differential equation, how to find a differential equation from the general solution and distinguish between the general, special and individual solution. The existence and unity of the solution for first-order linear differential equations. Initial and boundary value problems. Systems of differential equations</li> <li>• Solving types of first-order and first-order differential equations, equations separated by variables, homogeneous equations, differential equations with linear coefficients, complete equations, integration factor, non-exact equations, Bernoulli's equation, solving differential equations using an appropriate transformation</li> <li>• Applications of differential equations in engineering, physics and biology such as population growth and decay and cooling and heating problems.</li> <li>• Solving first-order and higher-order differential equations, equations solved in the derivative variable, equations solved in the dependent variable, the Clairaut equation and the Lagrange's equation, as well as equations solved in the independent variable</li> <li>• Solving higher-order differential equations, the Wronskian determinant, defining the differential operator D, how to write a differential equation in terms of the operator D, finding its general and specific solution for higher-order equations, and finding the general solution for higher-order differential equations. Analyze homogeneous differential equations with constant and higher order coefficients. Solving inhomogeneous and higher-order differential equations using undetermined method</li> <li>• s and and inverse D operator.</li> <li>• Introducing the student to the Laplace transform and the Laplace transform of functions and derivatives, defining the inverse of the transformation, and how to solve differential equations using it.</li> <li>• Solve the differential equation using power series</li> </ul>
<b>8. Teaching and Learning Strategies</b>	
<b>Strategy</b>	<ol style="list-style-type: none"> <li>1) That the student remembers the information and laws given in the course.</li> <li>2) That the student understands the course topics and the mathematical problems related to them</li> <li>3) The student should be able to apply what he has learned to solve mathematical problems</li> <li>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</li> <li>5) The student composes problems related to the course topics and then arrives at their</li> </ol>

correct solution.  
6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.

## 9. Course Structure

Week	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4 weeks	Defining the concept of differential equations, knowing the order of a differential equation and the degree of a differential equation, how to find a differential equation from the general solution and distinguish between the general, special and individual solution. The existence and unity of the solution for first-order linear differential equations Solving types of first-order and first-order differential equations, equations separated by variables, homogeneous equations, differential equations with linear coefficients, complete equations, integration factor, incomplete equations, Bernoulli's equation, solving differential equations using an appropriate transformation	The first chapter: Basic concepts in ordinary differential equations. It includes definitions and examples of ordinary and partial differential equations. Degree and rank of the differential equation. Linear and nonlinear differential equations. Homogeneous differential equations. Initial and boundary value problems. Systems of differential equations. Solutions of differential equations: general, specific and individual solutions. Formation of differential equations from the general solution	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
8 weeks	Solving types of first-order and first-order differential equations, equations separated by variables, homogeneous equations, differential equations with linear coefficients, complete equations, integration factor, incomplete equations, Bernoulli's equation, solving differential equations using an appropriate transformation	The existence and unity of the solution for first-order linear differential equations Solutions of differential equations.	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Learn to solve first-order and higher-order differential equations, equations solved in the derivative variable, equations solved in the dependent variable, the Clairaut equation and the lagrangeange equation, as well as equations solved in the independent variable..	The second Chapter: Solving types of first-order and first-order differential equations, equations separated by variables, homogeneous equations, differential equations with linear coefficients, complete equations, integration factor, incomplete equations, Bernoulli's equation, solving differential equations using an appropriate transformation	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Learn to solve higher-order differential equations, the Runeskin determinant, the definition of the differential operator D, how to write a differential equation in terms of the operator D, and find its general and specific solution for higher-order equations and find the general solution for higher-order differential equations. Analyze homogeneous differential equations with constant and higher order coefficients. Solving inhomogeneous and higher-order differential equations using the method of non-specific coefficients and the method of changing the mean	The third chapter. Applications of differential equations in engineering, physics and biology such as population growth and decay and cooling problems	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
7 weeks	general solution for higher-order differential equations. Analyze homogeneous	The fourth chapter. Solving first-order and higher-	Lecture and discussions	Discuss daily exam, and

	differential equations with constant and higher order coefficients. Solving inhomogeneous and higher-order differential equations using the method of non-specific coefficients and the method of changing the mean	order differential equations, equations solved in the derivative variable, equations solved in the dependent variable, the Clairaut equation and the Lagrange equation, as well as equations solved in the independent variable		attendance exams Monthly
3 weeks	Introducing the student to the Laplace transform and the Laplace transform of functions and derivatives, defining the inverse of the transformation, and how to solve differential equations using it. Learn to use power series to solve differential equations	The fifth chapter. Solving higher-order differential equations, the Wronskian determinant, defining the differential operator D, how to write a differential equation in terms of the operator D, finding its general and specific solution for higher-order equations, and finding the general solution for higher-order differential equations. Analyze	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Solve the differential equation using power series	The sixth chapter homogeneous differential equations with constant and higher order coefficients. Solution of inhomogeneous and higher order differential equations using the method of undetermined coefficients The sixth chapter Introducing the student to the Laplace transform and the Laplace transform of functions and derivatives, defining the inverse of the transformation, and how to solve differential equations using it.	Lecture and discussions	Discuss daily exam, and attendance exams Monthly

### 10. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports.... etc

### 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Methods for solving ordinary differential equations, written by Dr. Khaled Al-Samarrai and Dr. Yahya Saeed
Main references (sources)	Earl Rainville and Phillip E. Bedient Bedient, Elementary Differential Equations , Macmillan Canada
Recommended books and references (scientific journals, reports...)	Differential equations written by Dr. Hassan Mustafa Al-Awadi Dr. Abdel Wahab Abbas Dr. Sanaa Ali Zarea

## Course Description Form **Axiomatic Systems and geometry**

<b>1. Course Name:</b>	Axiomatic Systems and geometry			
<b>2. Semester / Year:</b>	annual			
<b>3. Description Preparation Date:</b>	2023-2024			
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department			
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	90 hours, 3 hours per week *30 weeks 6 units			
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Ayat Muhammad Jabr			
<b>7. Course Objectives</b>				
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>• <b>Explaining to the student the basics of geometry, geometrical systems and axioms.</b></li> <li>• <b>Enabling the student to prove theorems in a logical and sound manner, starting from the data and what is required to be proven, the drawing, and then the proof.</b></li> <li>•</li> <li>• <b>The student learns direct and indirect methods of proof.</b></li> </ul>			
<b>8. Teaching and Learning Strategies</b>				
<b>Strategy</b>	<ol style="list-style-type: none"> <li>1) That the student remembers the information and laws given in the course.</li> <li>2) That the student understands the course topics and the mathematical problems related to them</li> <li>3) The student should be able to apply what he has learned to solve mathematical problems</li> <li>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</li> <li>5) The student composes problems related to the course topics and then arrives at their correct solution.</li> <li>6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.</li> </ol>			
<b>9. Course Structure</b>				
<b>Week</b>	<b>Unit or subject name</b>	<b>Required Learning Outcomes</b>	<b>Learning method</b>	<b>Evaluation method</b>
4 weeks	Axiomatic systems, properties of the axiomatic system	Enables the student to understand the basics of the axiomatic system	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
7 weeks	Evaluation of Euclidean geometry	The student was able to understand Hilbert's system	Lecture and discussions	Discuss daily exam, and attendance exams

				Monthly
5 weeks	Equivalence and comparison	The student was able to create a straight line and compare the straight lines, as well as create an angle and compare the angles	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Preliminary geometry	In this chapter, Euclid's theorems are re-proven	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
5 weeks	Non-Euclidean geometry (Hyperbolic Geometry and elliptical geometry)	In this topic, non-Euclidean geometry and its types are explained to the student	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Projective Geometry	The student is able to understand the meaning of perspective and projectivity	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
1 weeks	Transformation geometry	The student is able to understand reflection on a line, axial symmetry, and rotation	Lecture and discussions	Discuss daily exam, and attendance exams Monthly

## 10. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports.... etc

## 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	هندسة التحويلات والهندسة التآلفية تأليف : ماكس جيجز ترجمة : د. محمد عادل سودان، د. محمد سعيد البرني، د. موفق دعبول

## Course Description Form **Group Theory**

<b>23. Course Name:</b>	Group Theory			
<b>24. Semester / Year:</b>	annual			
<b>25. Description Preparation Date:</b>	2023-2024			
<b>26. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department			
<b>27. Number of Credit Hours (Total) / Number of Units (Total)</b>	90 hours, (3 hours per week *30 per week) 6 units			
<b>28. Course administrator's name (mention all, if more than one name)</b>	Name: Ali Sami Rashid Email: <a href="mailto:alisamirashid@uomisan.edu.iq">alisamirashid@uomisan.edu.iq</a>			
<b>29. Course Objectives</b>				
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>• • <b>Developing abstract thinking at the level of knowledge, understanding, comparison and evaluation among students.</b></li> <li>• • <b>Connecting the concepts of set theory with higher mathematics and the concepts of modern abstract algebra.</b></li> <li>• • <b>Preparing the student's thought to deal with the complex structure of algebraic systems, which the student studies in ring theory.</b></li> <li>• • <b>Knowing and consolidating the philosophical reasons for the laws and relationships that the student studied in the secondary stages.</b></li> <li>• • <b>Developing students' skills in mathematical proof through important theorems in group theory.</b></li> <li>• • <b>Presenting some necessary concepts in number theory that the student needs in group theory.</b></li> </ul>			
<b>30. Teaching and Learning Strategies</b>				
<b>Strategy</b>	<ol style="list-style-type: none"> <li>1) That the student remembers the information and laws given in the course.</li> <li>2) That the student understands the course topics and the mathematical problems related to them</li> <li>3) The student should be able to apply what he has learned to solve mathematical problems</li> <li>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</li> <li>5) The student composes problems related to the course topics and then arrives at their correct solution.</li> <li>6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.</li> </ol>			
<b>31. Course Structure</b>				
<b>Week</b>	<b>Required Learning Outcomes</b>	<b>Unit or subject name</b>	<b>Learning method</b>	<b>Evaluation method</b>
5 weeks	A review of set theory, binary operations, mathematical system, semigroup, neutral	group	Lecture and discussions	Discuss daily exam, and

	semigroup, commutative semigroup, group, commutative group, examples of commutative and non-commutative numerical groups, examples of matrix groups, theorems about group properties.			attendance exams Monthly
3 weeks	order of group, finite and infinite groups, order of element, idempotent element, nilpotent element, Boolean group, cyclic group.	order of group	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Division algorithm, division relation by $Z$ , equivalence of integers, congruent class module $n$ , set of integers module, group of integers module $n$ . One-to-one correspondence functions, permutations, symmetry groups, square symmetry groups.	Important Groups	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	One-to-one correspondence functions, permutations, symmetry groups, square symmetry groups. Subgroup, cyclic subgroup, direct product of subgroups, cosets, order and index of subgroups, Lagrange's theorem, simple group, normal subgroup, Quotient set, Quotient group, subgroup of the quotient group.	Subgroup & Quotient group	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
5 weeks	Groups Homomorphism, the kernel of Homomorphism, types of Homomorphism, basic theorems of Homomorphism.	Groups Homomorphism	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Chains, some types of Chains, Maximal normal subgroups, Jordan-Holder theorem.	Chains	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Prime groups, Sylow's theorems, examples and theorems.	Prime groups	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
	Finite nilpotent groups, solvable groups.	solvable groups		Discuss daily exam, and attendance exams Monthly

### 32. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports.... etc

### 33. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Introduction to Modern Abstract Algebra , By David M. Burton, 1967
Main references (sources)	Abstract and linear Algebra , By David M. Burton, 1972
Recommended books and references (scientific journals, reports...)	Abstract Algebra, Schaum's Outline 2nd edition. by <a href="#">Lloyd Jaisingh</a> & <a href="#">Frank Ayres</a>

<b>38. Number of Credit Hours (Total) / Number of Units (Total)</b>	60 hours, 2 hours per week * 30 weeks 4 units
<b>39. Course administrator's name (mention all, if more than one name)</b>	Name: Email:

### 40. Course Objectives

<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>• The mathematics student acquires knowledge of the prescribed subjects and understands and studies the meaning of scientific research.</li> <li>• Scientific knowledge of the prescribed curriculum subjects and the basics of descriptive statistics.</li> <li>• Practical application by conducting research to apply the statistical measures studied by the student and statistical analysis</li> <li>• Course outcomes and teaching, learning and evaluation methods</li> </ul>
--------------------------	--

### 41. Teaching and Learning Strategies

<b>Strategy</b>	<ol style="list-style-type: none"> <li>1) That the student remembers the information and laws given in the course.</li> <li>2) That the student understands the course topics and the mathematical problems related to them</li> <li>3) The student should be able to apply what he has learned to solve mathematical problems</li> <li>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</li> <li>5) The student composes problems related to the course topics and then arrives at their correct solution.</li> <li>6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.</li> </ol>
-----------------	---

### 42. Course Structure

Week	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
2 weeks	The student learns the concept of science Its goals, scientific thinking, and the ethics of scientific research	Science, scientific thinking, and the ethics of scientific research	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	The concept of scientific research, qualities of research and a good researcher	The problem of scientific research	Lecture and discussions	Discuss daily exam, and attendance exams

				Monthly
2 weeks	Statistics and method Statistics in data collection	Collection and classification of data	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Data collection methods and research design method	Samples, reasons for selecting them, and conditions	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	The student learns the method Research formulation	Writing scientific research And research parts	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	The student learned how to tabulate data and process it statistically	Frequency distributions and methods of displaying data	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
6 weeks	The student learned how to tabulate data and process it statistically	Measures of central tendency	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
5 weeks	The student learned how to tabulate data and process it statistically	Measures of dispersion	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
5 weeks	The student learned how to tabulate data and process it statistically	Types of samples and principles of probability	Lecture and discussions	Discuss daily exam, and attendance exams Monthly

#### 43. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports.... etc

#### 44. Learning and Teaching Resources

Required textbooks (curricular books, if any)	الاحصاء، تأليف : د.محمود حسن المشهداني وامير حنا هرمرز 1989 اساليب البحث العلمي، تأليف : د.جودت عزت عطوى 2119
Main references (sources)	<ul style="list-style-type: none"> <li>● الاحصاء، تأليف : د.محمود حسن المشهداني وامير حنا هرمرز 1828</li> <li>● كتاب الانحدار الخطي المتعدد، تأليف : د.عبد الرزاق محمد صلاح شريجي 1821</li> <li>● اساليب البحث العلمي، تأليف : د.جودت عزت عطوى 2338</li> <li>● مقدمة في منهج البحث العلمي، تأليف : د. رحيم يونس كرو 0118</li> </ul>

## Course Description Form **Growth psychology**

<b>45. Course Name:</b>	Growth psychology
<b>46. Semester / Year:</b>	annual
<b>47. Description Preparation Date:</b>	2023-2024
<b>48. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>49. Number of Credit Hours (Total) / Number of Units (Total)</b>	60 hours, 2 hours per week * 30 weeks 4 units
<b>50. Course administrator's name (mention all, if more than one name)</b>	Name: Email:
<b>51. Course Objectives</b>	
<b>Course Objectives</b>	<p><b>The course aims to make the mathematics student able to:</b></p> <ol style="list-style-type: none"> <li><b>1- Knows the psychology of growth and its relationship with other sciences and learns about the laws of growth in daily and future life</b></li> <li><b>2- Identify the genetic and environmental factors affecting growth and some diseases</b></li> <li><b>3- He gets to know the methods and types of scientific research and applies what he knows in research and studies</b></li> <li><b>4- Recognizes the importance of childhood and adolescence and their stages in the physical, mental, emotional, social and moral fields.</b></li> <li><b>5- It shows the role of social institutions in the socialization of the child, and the relationship between the adolescent and community institutions</b></li> <li><b>6- It shows the importance of work, choosing it, and acquiring inclinations and trends</b></li> <li><b>7- It identifies some of the problems of adolescence and methods of treating them, and proposes new methods to address problems</b></li> </ol>
<b>52. Teaching and Learning Strategies</b>	
<b>Strategy</b>	<ol style="list-style-type: none"> <li>1) That the student remembers the information and laws given in the course.</li> <li>2) That the student understands the course topics and the mathematical problems related to them</li> <li>3) The student should be able to apply what he has learned to solve mathematical problems</li> <li>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</li> <li>5) The student composes problems related to the course topics and then arrives at their correct solution.</li> <li>6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.</li> </ol>

### 53. Course Structure

Week	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4 weeks	Enables the student to learn about Growth psychology	Developmental psychology and the factors affecting it	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Enables the student to understand scientific research methods	Scientific research methods in developmental psychology	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Understanding the stages of childhood	Childhood and its fields	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Identify existing social institutions	Social institutions	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Understanding adolescence	Adolescence	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Enables the student to understand the adolescent's relationship with society	Adolescent and society	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Enables the student to understand the professions to which the teenager is inclined	Adolescent and career	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Identifying the thinking and tendencies of teenage students	Adolescents' attitudes and tendencies		
3 weeks	Student understanding of adolescent problems	Some teenage problems		

### 54. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports.... etc

### 55. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Developmental psychology book, human psychology book, introduction to psychology book, childhood and adolescence book, language psychology book, socialization book
Main references (sources)	
Recommended books and references (scientific journals, reports...)	
Electronic References, Websites	

## Course Description Form English

<b>56. Course Name:</b>	
<b>57. Semester / Year:</b>	annual
<b>58. Description Preparation Date:</b>	2023-2024
<b>59. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>60. Number of Credit Hours (Total) / Number of Units (Total)</b>	30 hours, 1 hours per week * 30 weeks 2 units
<b>61. Course administrator's name (mention all, if more than one name)</b>	Name: Email:

### 62. Course Objectives

#### Course Objectives

•

### 63. Teaching and Learning Strategies

#### Strategy

- The course aims to teach and train students to learn educational vocabulary in the English language, conversation, listening, pronunciation of phonemes, and the rules of the English language.
- Graduating a student who is able to use the basics of the English language in presenting mathematics topics

### 64. Course Structure

Week	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
3 weeks	Past and future tense and question formulation	Acquaintance	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Present simple and continuous	The way we live	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Past simple and continuous	Everything went wrong	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Expressing quantities	Let's go shopping	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Action patterns	what do you want to do	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Degrees of comparison	Tell me what you would like	Lecture and	Discuss daily

			discussions	exam, and attendance exams Monthly
2 weeks	present perfect	the fame	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Introduction to auxiliary verbs	Do and don't		
2 weeks	Time conditions	Visit places		
2 weeks	Infinitive	Scared to death		
2 weeks	Passive voice	Things that changed the world		
2 weeks	Formulation of the if conditional	Dreams and reality		
2 weeks	Present perfect continuous	Make a living		
2 weeks	Past Perfect	Family relations		
2 weeks		Review		

### 65. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports.... etc

### 66. Learning and Teaching Resources

Required textbooks (curricular books, if any)	<ul style="list-style-type: none"> <li>• New Headway Plus / Pre-Intermediate Student's Book</li> <li>• New Headway Plus / Pre-Intermediate Workbook With Key</li> </ul>
Main references (sources)	<ul style="list-style-type: none"> <li>• <b>New Headway Plus / Pre-Intermediate Workbook With Key</b></li> </ul>
Recommended books and references (scientific journals, reports...)	
Electronic References, Websites	

## Course Description Form Educational administration and secondary education

<b>1. Course Name:</b>	Educational administration and secondary education			
<b>2. Semester / Year:</b>	annual			
<b>3. Description Preparation Date:</b>	2023-2024			
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department			
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	60 hours, 2 hours per week * 30 weeks 4 units			
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Email:			
<b>7. Course Objectives</b>				
<b>Course Objectives</b>	•			
<b>8. Teaching and Learning Strategies</b>				
<b>Strategy</b>	1- Preparing a future teacher capable of teaching and communicating with students in person and electronically 2- Preparing a teacher who has the ability to deal with classroom problems and find solutions to them 3- Emphasis on studying administrative concepts that are related to administrative and educational work. 4- Introducing the student to the importance of administration in the field of education.			
<b>9. Course Structure</b>				
Week	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4 weeks	Management - its concept - its origins - its historical development	Management	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
8 weeks	Levels of administration in education	Levels of administration in education	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Centralized and decentralized administration - their types	Centralized and decentralized administration	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Administration - educational - educational - school	Administration - educational - educational - school	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
7 weeks	Classroom management - its concept and everything related to the subject	Classroom management - its concept	Lecture and discussions	Discuss daily exam, and attendance exams Monthly

3 weeks	Functions, methods and patterns in management	Functions, methods and patterns in management	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
2 weeks	Explanatory chapter on	Explanatory chapter on	Lecture and discussions	Discuss daily exam, and attendance exams Monthly

### 10. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports.... etc

### 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	University-prescribed vocabulary Book of Administration, Supervision, and Secondary Education - Alaa Hakim Al-Nasser 2312 Administration and Secondary Education Book - Sami Abdel Fattah Raouf (2323) School applications Online research and resources
Main references (sources)	
Recommended books and references (scientific journals, reports...)	
Electronic References, Websites	

# **Study Materials for** **The 3<sup>rd</sup> Stage**

## Course Description Form Partial differential equations

<b>1. Course Name:</b>		Partial differential equations			
<b>2. Semester / Year:</b>		annual			
<b>3. Description Preparation Date:</b>		2023-2024			
<b>4. Available Attendance Forms:</b>		Lectures are delivered to students in person according to the schedule announced in the department			
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>		120 Hours (4 Hours*30 weeks) 6 Units			
<b>6. Course administrator's name (mention all, if more than one name)</b>		Name: Abdul-Karim Ali Hussein Email : abdukkareem.ali@uomisan.edu.iq			
<b>7. Course Objectives</b>					
<b>Course Objectives</b>		<ul style="list-style-type: none"> <li>* Learn the basic concepts of partial differential equations and methods for solving homogeneous and inhomogeneous partial differential equations.</li> <li>* Learn to solve some life problems, such as heat, wave, and other problems, which are expressed as partial differential equations.</li> <li>* Study and understand Laplace equations and Laplace transformations.</li> </ul>			
<b>8. Teaching and Learning Strategies</b>					
<b>Strategy</b>		<ul style="list-style-type: none"> <li>* In-person lectures in classrooms.</li> <li>* Discussion method, surprise exams, and methods of refining skills.</li> <li>* Asking intellectual questions or holding a competition between students, stimulating creative thinking, and answering clearly and quickly to the problems presented</li> </ul>			
<b>9. Course Structure</b>					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1-7	28 Hours	Learn how to solve homogeneous equations	Solving homogeneous differential equations	Lecture and Discussion	Quarterly and daily attendance exams
8-10 Weeks	12 Hours	Learn how to solve non-homogeneous equations	Solving non-homogeneous differential equations	Lecture and Discussion	Quarterly and daily attendance exams
11-15 Weeks	20 Hours	Learn how to solve Fourier series	The Fourier series	Lecture and Discussion	Quarterly and daily attendance exams
16-18 Weeks	12 Hours	Solve the heat equation	The heat conduction equation in one dimension	Lecture and Discussion	Quarterly and daily attendance exams
19-22 Weeks	16 Hours	Solve the wave equation	The wave equation in one dimension	Lecture and Discussion	Quarterly and daily attendance exams
23-27 Weeks	20 Hours	Solve the Laplace equation	Solve Laplace's equation in two dimensions	Lecture and Discussion	Quarterly and daily attendance exams
28-30 Weeks	12 Hours	Solve the wave and heat equation by iterative methods	Iterative methods for solving partial differential equations of the first and second order	Lecture and Discussion	Quarterly and daily attendance exams

## 10. Course Evaluation

- \* Semi-daily and monthly tests and surprise exams.
- \* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- \* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

## 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	1- Methods for solving partial differential equations (Dr. Atallah Thamer Al-Ani) 2- Partial differential equations for scientific and engineering colleges (Dr. Atallah Thamer Al-Ani).
Main references (sources)	1- Partial Differential Equations W.A.Straus 2-Advanced differential equations
Recommended books and references (scientific journals, reports...)	Partial Differential Equations with fourier Series and Boundary value Problems (Nakhle H. Asmar)
Electronic References, Websites	<a href="https://www.bing.com/search?q=https%3A%2F%2Fwww.alfreed-ph.com&amp;form=IPRV10#">https://www.bing.com/search?q=https%3A%2F%2Fwww.alfreed-ph.com&amp;form=IPRV10#</a>

## Course Description Form **Probability and statistics**

<b>1. Course Name:</b>	Probability and statistics				
<b>2. Semester / Year:</b>	annual				
<b>3. Description Preparation Date:</b>	2023-2024				
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department				
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*120 hours, (4 hours per week *30 per week)				
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Assis. prof.D Sarah Abdel Hussein Bandar Email: sara.ab@uomisan.edu.iq				
<b>7. Course Objectives</b>					
<b>Course Objectives</b>	<p>The course aims to provide the student with basic information on each of the following topics:</p> <ul style="list-style-type: none"> <li>❖ Descriptive statistics: definitions, statistical symbols, random variables, population, sample data, plotting data, measures of central tendency (arithmetic mean, median, mode), measures of dispersion, correlation and regression.</li> <li>❖ Introduction to probability: definitions, experiments, events, counting methods, permutations and combinations, theories of probability, laws of probability (the law of addition of probabilities, the law of conditional probability, the law of multiplying probabilities), independent events, conditional events, Bayes' theorem, examples, external questions.</li> <li>❖ Random variables and probability distributions: definitions, continuous and discrete random variables, continuous and discrete probability distributions, examples theories, external questions</li> <li>❖ Mathematical expectation and variance: Definitions, theories, examples, moments, function generating the moments, external questions</li> </ul>				
<b>8. Teaching and Learning Strategies</b>					
<b>Strategy</b>	<ol style="list-style-type: none"> <li>1- In-person lectures in the classroom</li> <li>2- The method of discussion and dialogue between the student and the teacher</li> <li>3- Daily and monthly attendance tests</li> <li>4- Preparing the student scientifically and educationally according to solid scientific foundations</li> <li>5- Education by making the student a teacher to enhance his self-confidence</li> <li>6- Assigning the student to make reports on topics related to the curriculum vocabulary</li> <li>7- Distributing students into a work team to solve assignments during the lecture in order to stimulate the spirit of ability and cooperation with each other</li> </ol>				
<b>9. Course Structure</b>					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1-5	20	The student learns what was presented in the lecture	Descriptive statistics	Presentation lecture and discussion	Attendance exams (daily and monthly)
6-10	20	The student learns what was presented in the lecture	Correlation and regression (least squares method, matrices, and Cramer's determinants method)	Presentation lecture and discussion	Attendance exams (daily and monthly)

11-15	20	The student learns what was presented in the lecture	Introduction to probability Random variables	Presentation lecture and discussion	Attendance exams (daily and monthly)
16-20	20	The student learns what was presented in the lecture	Probability distributions Discrete and continuous	Presentation lecture and discussion	Attendance exams (daily and monthly)
21-25	20	The student learns what was presented in the lecture	Mathematical expectation and variance	Presentation lecture and discussion	Attendance exams (daily and monthly)
26-30	20	The student learns what was presented in the lecture	Some special probability distributions	Presentation lecture and discussion	Attendance exams (daily and monthly)

### 10. Course Evaluation

- 1- Semi-daily and monthly tests and surprise exams.
- 2- Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- 3- Close follow-up on solving chapter questions and paying attention to the process of writing simple reports on any valuable information or an outstanding mathematician.

### 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	1- Introduction to Statistics / Author: Dr. Humbled Mahmoud Al-Rawi 2- Probability Theory, written by: Dr. Walid Al-Nouri
Main references (sources)	1-Probability and Statistics By Morris H. De Groot 2-Intoduction to Mathematical Statistics By Hogg and Craig
Recommended books and references (scientific journals, reports...)	1- Theories and problems in probability (Schaum's Abstracts Series) Written by Dr. Seymour Lipschitz Translated by Dr. Sameh Dawoud/Ain Shams University An 2- Introduction to probability theory and mathematical statistics ; by Rohtag

## Course Description Form Mathematical Analysis

<b>1. Course Name:</b>	Mathematical analysis				
<b>2. Semester / Year:</b>	annual				
<b>3. Description Preparation Date:</b>	2023-2024				
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department				
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*120 hours, (4 hours per week *30 per week) * 180 units, (6 units per week * 30 weeks)				
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Dr. Hadeel Ghazi Abd Ali Email: hadeel_ghazi@uomisan.edu.iq				
<b>7. Course Objectives</b>					
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>* An expanded and complementary study of the first stage regarding the foundations of mathematics.</li> <li>* Study and understand the metric space and everything related to it (sequences, infinite series, continuity, regular continuity and compact spaces).</li> <li>* Solve problems and prove theories related to metric space.</li> <li>* Study the derivative and learn about its properties and applications (Rolle's theorem, chain rule, maximum and minimum value, average value and their results).</li> <li>* Expanding students' awareness regarding the issue of the Riemann integral, the necessary and sufficient condition for the Riemann integral, the fundamental theorem in calculus, and its relationship to the concept of continuity, the derivative, and sequences.</li> <li>* Students' understanding of measurement theory, its properties, and special concepts.</li> <li>*Linking mathematical analysis with the concept of topology.</li> </ul>				
<b>8. Teaching and Learning Strategies</b>					
<b>Strategy</b>	<ul style="list-style-type: none"> <li>* In-person lectures in classrooms.</li> <li>* Discussion method, surprise exams, and methods of refining skills.</li> <li>* Asking intellectual questions or holding a competition between students, stimulating creative thinking and answering clearly and quickly to the problems presented.</li> </ul>				
<b>9. Course Structure</b>					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
2 Weeks	8 Hours	The student is able to understand the given material	Real Numbers	Lecture and Discussion	Quarterly and daily attendance exams
4 Weeks	16 Hours	The student is able to understand the given material	Metric Spaces	Lecture and Discussion	Quarterly and daily attendance exams
3 Weeks	12 Hours	The student is able to understand the given material	Sequences in Metric Spaces	Lecture and Discussion	Quarterly and daily attendance exams.
3 Weeks	12 Hours	The student is able to understand the given	Infinite Real Series	Lecture and Discussion	Quarterly and daily attendance

		material			exams.
3 Weeks	12 Hours	The student is able to understand the given material	Continuity in Metric spaces	Lecture and Discussion	Quarterly and daily attendance exams
3 Weeks	12 Hours	The student is able to understand the given material	Derivative	Lecture and Discussion	Quarterly and daily attendance exams
4 Weeks	16 Hours	The student is able to understand the given material.	Riemann's integral	Lecture and Discussion	Quarterly and daily attendance exams
4 Weeks	16 Hours	The student is able to understand the given material	Measure Theory Lebesgue integral	Lecture and Discussion	Quarterly and daily attendance exams

### 10. Course Evaluation

- \* Semi-daily and monthly tests and surprise exams.
- \* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- \* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

### 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	قدمة في التحليل الرياضي /الأستاذ الدكتور عادل غسان نعيم /1981
Main references (sources)	ة في التحليل الرياضي /الأستاذ الدكتور عادل غسان نعيم /1981
Recommended books and references (scientific journals, reports...)	*Principles of Mathematical Analysis by Walter Rudin /1953  *Mathematical Analysis by Tom Apostol /1957

[42] Course Name:
<b>Ring Theory</b>
[43] Course Code:
[44] Semester / Year:
Year
[45] Description Preparation Date:
2023–2024
[46] Available Attendance Forms:
[47] Number of Credit Hours (Total) / Number of Units (Total)
4 Hours (120 Hours)/ 6 Units (40 Units)
[48] Course administrator's name (mention all, if more than one name)
Name: Dr. Hiba Rabeea Baanoon Email: hibabaanoon@uomisan.edu.iq
[49] Course Objectives
1-Theoretical Understanding: <ul style="list-style-type: none"> <li>• Understand basic definitions, such as: rings, fields, ideals, homomorphisms, and isomorphisms.</li> <li>• Master the properties of arithmetic operations in rings.</li> <li>• Identify different types of rings, such as: commutative rings, and integral domain.</li> <li>• Study the properties of ideals.</li> <li>• Understand the fundamental isomorphism theorem for rings.</li> </ul>

## 2- Practical Skills:

- Solve problems related to ring operations.
- Prove properties of rings using principles of mathematical logic.
- Develop logical and analytical thinking skills.

## 3-Personal Skills:

- Enhance problem-solving and critical thinking skills.
- Improve communication and mathematical expression skills.
- Develop teamwork and collaboration skills.
- Increase self-confidence and self-learning ability.
- Stimulate innovation and creativity in solving mathematical problems.

## 4- Interdisciplinary Connections:

- Relate ring theory to other areas of mathematics, such as: linear algebra, and topology.
- Demonstrate the importance of ring theory in solving real-world problems.

## 5- Educational Objectives:

- Cultivate a love for mathematics and self-learning.
- Encourage students to think creatively.
- Prepare students for further study of advanced mathematics topics.
- Qualify students for work in research and teaching.

## [50] Teaching and Learning Strategies

### 1-Active Learning:

- **Project-based learning:** Assigning students research projects related to ring theory, such as: analyzing the properties of a specific ring, or proving a mathematical theorem.
- **Class discussions:** Encouraging students to participate in discussions about the concepts and principles of ring theory.
- **Inquiry:** Posing open-ended questions to students to stimulate their critical thinking and analysis of concepts.

### 2-Use of Technology:

- Distance learning: Providing access to distance learning through online educational platforms.

### 3-Connecting Theory to Practice:

- **Providing real-world examples:** Linking theoretical concepts to their applications in other fields such as: physics, engineering, and computer science.
- **Inviting guest speakers:** Inviting experts in the field of ring theory to give lectures and workshops for students.

#### 4-Assessment of Learning:

- **Continuous assessment:** Using tools such as short quizzes, homework assignments, and participation in discussions to assess student progress.
- **Final assessment:** Using comprehensive exams to assess student learning of the entire year's content.

#### [51] Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
3 Weeks	12 Hours	Understanding Rings and Fields: Properties and Operations	Definition and Properties of Rings	Lecture and Discussion	Exams:  Daily: Short quizzes to assess understanding of concepts.  Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Understanding Subrings of Rings: Definitions, Examples, and Properties.	Subrings	Lecture and Discussion	Exams:  Daily: Short quizzes to assess understanding of concepts.  Monthly: Comprehensive exams to assess learning progress.
5 Weeks	20 Hours	Understanding Ideals: Properties, Significance, and Construction of	Ideals and Quotient Rings	Lecture and Discussion	Exams:  Daily: Short quizzes to assess

		Quotient Rings.			understanding of concepts.  Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Understanding the Meaning and Significance of ring homomorphism.	Rings homomorphisms	Lecture and Discussion	Exams:  Daily: Short quizzes to assess understanding of concepts.  Monthly: Comprehensive exams to assess learning progress.
6 Weeks	24 Hours	Studying Special Types of Ideals: Properties, Relations, and Examples	Special ideals	Lecture and Discussion	Exams:  Daily: Short quizzes to assess understanding of concepts.  Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Understanding Polynomial Rings: Properties and Examples	Polynomials' rings	Lecture and Discussion	Exams:  Daily: Short quizzes to assess understanding of concepts.  Monthly: Comprehensive

					exams to assess learning progress.
2 Weeks	8 Hours	Understanding the Meaning of Modules with its Properties and Examples.	Modules Theory	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Understanding the Meaning of Submodules with its Properties and Examples.	Modules Theory	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Understanding the Meaning of modules homomorphisms with its Properties and Examples.	Modules Theory	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
2	8	Learning About	Modules Theory	Lecture and	Exams:

Weeks	Hours	Special Types of Modules with Examples		Discussion	Daily: Short quizzes to assess understanding of concepts.  Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Learning About Special Types of Submodules with Examples	Modules Theory	Lecture and Discussion	Exams:  Daily: Short quizzes to assess understanding of concepts.  Monthly: Comprehensive exams to assess learning progress.

### [52] Course Evaluation

- 1- 50 Grade:
- Reports: 10 points
  - Daily Quizzes and Preparation: 5 points
  - Monthly Exams: 35 points
- 2- Final Exam: 50 points

### [53] Learning and Teaching Resources

Required textbooks (curricular books, if any)	Abstract and linear Algebra, By David M. Burton, 1972
Main references (sources)	Abstract and linear Algebra, By David M. Burton, 1972
Recommended books and references	▪ Foundations of Module and Ring Theory, by Robert Wisbauer, 2018.

(scientific journals, reports...)	▪ Modules and Rings by F.kasch, 1982

## Course Description Form **Numerical Analysis**

<b>12. Course Name:</b>	Numerical Analysis
<b>13. Semester / Year:</b>	annual
<b>14. Description Preparation Date:</b>	2023-2024
<b>15. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>16. Number of Credit Hours (Total) / Number of Units (Total)</b>	120 hours, (4 hours per week * 30 per week) 6 units
<b>17. Course administrator's name (mention all, if more than one name)</b>	Name: Dr. Asma Jassim Harfash Email:

### 18. Course Objectives

<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>• • Learn the basics of numerical analysis and error analysis</li> <li>• • Study methods for solving nonlinear equations in one variable and methods for solving a system of nonlinear equations as well as a system of linear equations.</li> <li>• • Study of interpolation</li> <li>• • Study of numerical calculus</li> <li>• • Study numerical solutions of ordinary differential equations</li> <li>• • Study methods for solving initial value problems</li> </ul>
--------------------------	--

### 19. Teaching and Learning Strategies

<b>Strategy</b>	<ol style="list-style-type: none"> <li>1) That the student remembers the information and laws given in the course.</li> <li>2) That the student understands the course topics and the mathematical problems related to them</li> <li>3) The student should be able to apply what he has learned to solve mathematical problems</li> <li>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</li> <li>5) The student composes problems related to the course topics and then arrives at their correct solution.</li> <li>6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.</li> </ol>
-----------------	---

### 20. Course Structure

Week	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4 weeks	That the student understands the importance of numerical analysis and realizes its methods for solving some non-linear practical problems for which analytical solutions may not be available or for which it is difficult to find analytical solutions.	Theoretical: analysis of errors / sources of errors / errors in mathematical operations. Types of practical errors: Program relative error and absolute error.	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Studying the concepts of convergence, stability and types of continuity	Theoretical: The concept of convergence and the concept of stability	Lecture and discussions	Discuss daily exam, and attendance exams

				Monthly
4 weeks	Study some types of numerical methods for solving	Theoretical: numerical solutions for nonlinear equations / determining the locations of the roots / the method of bisecting intervals / the secant method / the iterative method for the solid point / convergence of iterative methods / the Newton-Raphson method / finding the roots of polynomials / methods for solving a system of non-linear equations using the Newton-Raphson method and the solid point method / Bairstow's method/ Study and analyze the types of errors related to these methods and discuss their convergence rates. Practical: Interval bisection method program, secant method program, Newton-Raphson method program, solid point iterative method program, program for solving a system of nonlinear equations.	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
5 weeks	Nonlinear equations and systems.	Theoretical: Numerical solutions for linear systems (regular matrices - inverses - rank of the matrix) / Gauss elimination method / Gauss-Gordon method / partial anchoring / Cramer's method / Trigonometric analysis method. Indirect methods Practical: Cramer's method program to solve a system of linear equations, using a function found in MATLAB To calculate the best polynomial data fit coefficients.	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Solving systems using direct methods	Inclusion and interpolation / finite differences / Newton's progressive and regressive method and central formulas / proportional differences method / Lagrange's formula / least squares method / horizontal curves methods	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Learn the methods of inclusion Completion and some other methods	Numerical integration and differentiation / Newton's formulas for numerical differentiation / Trapezium rule for numerical integration / Simpson's rule / Three-eighths rule / Paul's rule / Wedel's rule / Romberg's method for improving results /Gauss Quadratic Numerical Integration Methods /Gauss Lender's Method	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
5 weeks	Some methods for solving differential equations	Differential equation solutions / Tyler series method / Explicit Euler method / Developed Euler method / Renca-Kutta method / Solving		

**21. Course Evaluation**

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports.... etc

**22. Learning and Teaching Resources**

Required textbooks

- Numerical analysis and its numerical calculation methods, written by Dr. Muhammad Mansour Sobh and Dr. Saleh bin Muni` Al-Harbi. Al Rushd Library, Kingdom of Saudi Arabia 0116
- Numerical Techniques (Numerical Analysis), second edition, written by Yassin Ahmed
- Al-Shaboul, Arab Community Library for Publishing and Distribution - Amman, Jordan 0117.
- Numerical analysis and programming methods on the electronic calculator, written by: Dr. Abdul Muttalib Ibrahim Al-Sheikh Ahmed, Ministry of Higher Education, University of Technology
- .0111
- Numerical Analysis, 2nd Edition by L. Ridgway Scott, Princeton University Press UK 2015.
- Numerical Analysis, 1st Edition by Ian Jacques and Colin Judd by Chapman and Hall, 1987.
- Matlab 2018a application program

Main references (sources)

Applied Numerical Analysis by Gerald C.F. and Wheatley P.O; Addison Wesley publishing Inc. 4891

## Course Description Form **Counseling and mental health**

<b>34. Course Name:</b>	Counseling and mental health			
<b>35. Semester / Year:</b>	annual			
<b>36. Description Preparation Date:</b>	2023-2024			
<b>37. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department			
<b>38. Number of Credit Hours (Total) / Number of Units (Total)</b>	60 hours, (2 hours per week * 30 weeks) 4 units			
<b>39. Course administrator's name (mention all, if more than one name)</b>	Name: Ashraf Saleh Email:			
<b>40. Course Objectives</b>				
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>• The mathematics student learned about the importance of psychological counseling and mental health in daily life</li> <li>• How to employ this knowledge in facing daily life situations in the field of education, family and society.</li> <li>• It makes students of colleges of education feel the value and importance of counseling and mental health in their dealings with school students after graduation and exercising their specialties as teachers in primary, middle and middle schools.</li> </ul>			
<b>41. Teaching and Learning Strategies</b>				
<b>Strategy</b>	<ol style="list-style-type: none"> <li>1) That the student remembers the information and laws given in the course.</li> <li>2) That the student understands the course topics and the mathematical problems related to them</li> <li>3) The student should be able to apply what he has learned to solve mathematical problems</li> <li>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</li> <li>5) The student composes problems related to the course topics and then arrives at their correct solution.</li> <li>6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.</li> </ol>			
<b>42. Course Structure</b>				
<b>Week</b>	<b>Required Learning Outcomes</b>	<b>Unit or subject name</b>	<b>Learning method</b>	<b>Evaluation method</b>
4 weeks	Acquiring knowledge in the field of psychological counselling, and converting this knowledge into behavior that contributes to guiding oneself and others	- A general lecture on counseling and mental health as a course of study - Guidance, psychological counselling, counseling psychology, the meaning of educational counselling. The origins and development of psychological counselling. - Development of the concepts	Lecture and discussions	Discuss daily exam, and attendance exams Monthly

		of guidance and counselling		
4 weeks	Acquiring knowledge in the field of psychological counselling, and converting this knowledge into behavior that contributes to guiding oneself and others	Justifications for psychological counselling, goals of psychological counselling. The relationship between counseling and other sciences. The relationship between counseling and other sciences. Fundamentals of guidance and counselling: Foundations General, philosophical foundations.	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Acquiring knowledge in the field of psychological counselling, and converting this knowledge into behavior that contributes to guiding oneself and others	Fundamentals of guidance and counselling: Foundations Psychological, social and neurological. Fields of psychological counselling. Methods of psychological counselling. Guidance and guidance theories: Psychoanalytic theory. Behavioral theory.	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Acquiring knowledge in the field of psychological counselling, and converting this knowledge into behavior that contributes to guiding oneself and others	Guidance and guidance theories: Self-theory. Existential theory. Information needed for the psychological counseling process: Importance of information, problems in collecting information, types of information Means of collecting information: Cumulative record case study anecdotal record - Second semester exam	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
3 weeks	Acquiring knowledge in the field of psychological counselling, and converting this knowledge into behavior that contributes to guiding oneself and others	Means of collecting information: the biography Corresponding observational tests and measures Counseling and guidance in school: Objectives of counseling and guidance in school	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
4 weeks	Acquiring knowledge in the field of psychological counselling, and converting this knowledge into behavior that contributes to guiding oneself and others	The mentor teacher: his functions and preparation. The educational counselor, his functions and preparation. The need for counseling programs in school. The meaning of mental health, negative definitions, positive definitions.	Lecture and discussions	Discuss daily exam, and attendance exams Monthly
8 weeks	Acquiring knowledge in the field of psychological counselling, and converting this knowledge into behavior that contributes to guiding oneself and others	Manifestations of mental health, basic concepts related to mental health, the relationship of mental health to other sciences. Characteristics of a normal personality, a normal person	Lecture and discussions	Discuss daily exam, and attendance exams Monthly

		<p>and an abnormal person. - Mental health standards. Manifestations of normal and abnormal behavior, personality integration. Psychological crises, the meaning of psychological crises, proper ways to solve psychological crises. Defensive tricks, frustration, psychological disorders. Psychological defense mechanisms. Compatibility, the meaning of compatibility, adaptation, differences between compatibility and adaptation. Types of compatibility, characteristics of a compatible person - Second semester exam</p>

## Course Description Form General Topology

<b>1. Course Name:</b>	General Topology
<b>2. Semester / Year:</b>	annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*96 hours, (4 hours per week *24 per week) * 180 units, (6 units per week * 30 weeks)
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Dr. Hadeel Ghazi Abd Ali Email: hadeel_ghazi@uomisan.edu.iq
<b>7. Course Objectives</b>	

<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>* Study and understand topological spaces and everything related to them (open and closed sets, neighbors, and bases) and how to solve their examples.</li> <li>* Identify the types of derived sets (inner, outer, boundary, limit and closure points), their properties, and how to find them.</li> <li>* Expanding students' understandings regarding the continuity in topological space and its equivalent definitions and linking them to their definition in other branches of mathematics.</li> <li>* Definition of homeomorphism mappings in topological spaces.</li> <li>* Study of compact space and definition of the cover (open, closed, finite and countable) and its properties.</li> <li>*Introducing students to Lindeloff space and its relationship to compact space and its properties.</li> <li>* Introducing students to the basic definitions of the axioms of separation and hereditary property, topological property.</li> <li>*Understanding connected and disconnected spaces, their equivalent definitions, and types of connected (local and communicative)</li> </ul>
--------------------------	--

### 8. Teaching and Learning Strategies

<b>Strategy</b>	<ul style="list-style-type: none"> <li>* In-person lectures in classrooms.</li> <li>* Discussion method, surprise exams, and methods of refining skills.</li> <li>* Asking intellectual questions or holding a competition between students, stimulating creative thinking and answering clearly and quickly to the problems presented.</li> </ul>
-----------------	--

### 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4 Weeks	16 Hours	The student is able to understand the given material	Topological Space	Lecture and Discussion	Quarterly and daily attendance exams
3 Weeks	12 Hours	The student is able to understand the given material	Derived sets	Lecture and Discussion	Quarterly and daily attendance exams
3 Weeks	12 Hours	The student is able to understand the given material	Continuity between topological spaces	Lecture and Discussion	Quarterly and daily attendance exams.

3 Weeks	12 Hours	The student is able to understand the given material	Derived topological spaces	Lecture and Discussion	Quarterly and daily attendance exams.
3 Weeks	12 Hours	The student is able to understand the given material	Compact spaces	Lecture and Discussion	Quarterly and daily attendance exams.
5 Weeks	20 Hours	The student is able to understand the given material	Separation axioms	Lecture and Discussion	Quarterly and daily attendance exams.
4 Weeks	16 Hours	The student is able to understand the given material	Connected spaces	Lecture and Discussion	Quarterly and daily attendance exams

## 10. Course Evaluation

- \* Semi-daily and monthly tests and surprise exams.
- \* Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- \* Close follow-up to solve chapter questions and pay attention to the process of writing simple reports about any valuable information or an outstanding mathematician.

## 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Topology by James R. Munkres/1999
Main references (sources)	Topology by James R. Munkres/1999

## Course Description Form Complex Analysis

<b>1. Course Name:</b>	Complex Analysis
<b>2. Semester / Year:</b>	annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	4 Hours (96 Hours)/ 6 Units (42 Units)
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: lecture : Ahmed Kareem Mutashar Email: ahmed86km@uomisan.edu.iq
<b>7. Course Objectives</b>	
<b>Course Objectives</b>	<ol style="list-style-type: none"> <li>1. Acquiring mathematical knowledge of the prescribed subjects and understanding the sufficient meanings behind each mathematical concept. <ul style="list-style-type: none"> <li>• Developing understanding of applying the nodal analysis subject as an integrated system of basic concepts that will provide a basis for understanding numerical systems.</li> <li>• Applying the steps to solve a mathematical problem by analyzing the problem and developing and implementing a solution plan.</li> <li>• Comparing complex functions with real functions to apply what the student learned in the mathematical analysis subject in the previous stage</li> </ul> </li> <li>2. Mastering Problem-Solving Skills: <ul style="list-style-type: none"> <li>• Analyzing complex problems and identifying their influencing factors.</li> <li>• Utilizing appropriate methods and techniques to solve problems.</li> <li>• Evaluating results and determining optimal solutions.</li> </ul> </li> <li>3. Developing Communication and Expression Skills: <ul style="list-style-type: none"> <li>• Explaining mathematical concepts clearly and accurately.</li> <li>• Using appropriate mathematical terminology when communicating with others.</li> </ul> </li> <li>4. Developing Teamwork Skills: <ul style="list-style-type: none"> <li>• Collaborating with classmates to solve problems and complete projects.</li> <li>• Exchanging ideas and information effectively.</li> <li>• Respecting others' opinions and cooperating to achieve common goals.</li> </ul> </li> <li>5. Raising Awareness of the Importance of Differential Equations in Various Fields: <ul style="list-style-type: none"> <li>• Understanding the role of differential equations in various scientific, technological, and engineering fields.</li> <li>• Applying differential equations to solve real-world problems in different fields.</li> <li>• Appreciating the achievements of mathematicians and their contributions to human civilization.</li> </ul> </li> <li>6. Cultivating a Love for Learning and Exploration: <ul style="list-style-type: none"> <li>• Arousing students' curiosity and love for learning.</li> <li>• Encouraging them to explore and innovate.</li> <li>• Developing a sense of accomplishment and satisfaction in themselves.</li> </ul> </li> </ol>

## 8. Teaching and Learning Strategies

<b>Strategy</b>	<p><b>1-Active Learning:</b></p> <ul style="list-style-type: none"> <li>• <b>Project-Based Learning</b> :Assigning students research projects related to complex numbers, such as: Solving specific exercises, researching problems that can be solved using special functions.</li> <li>• <b>Classroom Discussions:</b> Encouraging students to participate in discussions about the concepts of: Complex numbers, Elementary functions, Residues and poles</li> <li>• <b>Inquiry:</b> Posing open-ended questions to students to stimulate their critical thinking and analysis of concepts.</li> </ul> <p><b>2-Use of Technology:</b></p> <ul style="list-style-type: none"> <li>• Distance learning: Providing access to distance learning through online educational platforms.</li> </ul> <p><b>3-Connecting Theory to Practice:</b></p> <ul style="list-style-type: none"> <li>• <b>Providing real-world examples:</b> Linking theoretical concepts to their applications in other fields such as: physics, engineering, and computer science.</li> </ul> <p><b>4-Assessment of Learning:</b></p> <ul style="list-style-type: none"> <li>• <b>Continuous assessment:</b> Using tools such as short quizzes, homework assignments, and participation in discussions to assess student progress.</li> <li>• <b>Final assessment:</b> Using comprehensive exams to assess student learning of the entire year's content.</li> </ul>
-----------------	---

## 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
4 Week	16 Hours	The student is able to understand the material	Complex numbers	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
4 Week	16 Hours	The student is able to understand the material	Analytic functions	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
4 Week	16 Hours	The student is able to understand the material	Elementary functions	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
4 Week	16 Hours	The student is able to understand the material	Sequences , series ,power series	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
4 Week	16 Hours	The student is able to understand the material	Residues and poles	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.

## 10. Course Evaluation

1-50 Grade:  
Reports: 10 points  
Daily Quizzes and Preparation: 5 points  
Monthly Exams: 35 points  
2-Final Exam: 50 points

### 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	1-Complex variables and applications by Ruel V.Churchill الكتاب المساعد : مقدمة في التحليل العقدي، د. ابتسام كمال الدين و د. عطا الله ثامر.
Main references (sources)	Lectures prepared by me.

<b>1. Course Name:</b>	Mathematical Statistics
<b>2. Semester / Year:</b>	annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*96 hours, (4 hours per week *24 per week)
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Assis. prof.D Sarah Abdel Hussein Bandar Email: sara.ab@uomisan.edu.iq
<b>7. Course Objectives</b>	

<b>Course Objectives</b>	Providing the student with basic information in the field of mathematical and applied statistics by knowing the types of random variables and probability distributions of their discrete and continuous types, as well as methods for using integrals in finding common and marginal functions, and then knowing the basic functions such as the functions generating the moments and the discriminant functions, as well as knowing how to find a good estimator through the most commonly used methods. The ease and use of point or period estimation methods, as well as knowledge of the characteristics of a good estimator. Finally, the student acquires how to test statistical hypotheses and the extent of the correlation between variables by integrating them with the health, social, educational reality and other fields.
--------------------------	---

### 8. Teaching and Learning Strategies

<b>Strategy</b>	<ul style="list-style-type: none"> <li>1- In-person lectures in the classroom</li> <li>2- The method of discussion and dialogue between the student and the teacher</li> <li>3- Daily and monthly attendance tests</li> <li>4- Preparing the student scientifically and educationally according to solid scientific foundations</li> <li>5- Education by making the student a teacher to enhance his self-confidence</li> </ul>
-----------------	---

[54] Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1-5	20	The student learns what was presented in the lecture	Introduction to probability and discrete distributions	Presentation lecture and discussion	Attendance exams (daily and monthly)
6-11	24	The student learns what was presented in the lecture	Continuous distributions	Presentation lecture and discussion	Attendance exams (daily and monthly)
12-14	12	The student learns what was presented in the lecture	Moments and the functions generating them / finding the M.G.F for both continuous and discrete distributions	Presentation lecture and discussion	Attendance exams (daily and monthly)
15-18	16	The student learns what was presented in the lecture	Point estimation methods	Presentation lecture and	Attendance exams (daily)

				discussion	and monthly
19-23	20	The student learns what was presented in the lecture	Properties of a good estimator	Presentation lecture and discussion	Attendance exams (daily and monthly)
24-26	12	The student learns what was presented in the lecture	The exponential family	Presentation lecture and discussion	Attendance exams (daily and monthly)
27-30	16	The student learns what was presented in the lecture	Statistical hypothesis tests	Presentation lecture and discussion	Attendance exams (daily and monthly)

### 9. Course Evaluation

- 1- Semi-daily and monthly tests and surprise exams.
- 2- Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- 3- Close follow-up on solving chapter questions and paying attention to the process of writing simple reports on any valuable information or an outstanding mathematician.

### 10. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Introduction to mathematical statistics, by Hogg and Craig.
Main references (sources)	<ol style="list-style-type: none"> <li>1- مقدمة في نظرية الإحصاء /المؤلف د.عبد الله توفيق الهلباوي</li> <li>2- الاستدلال الإحصائي/المؤلف د.جلال مصطفى الصياد</li> <li>3- الإحصاء الرياضي /المؤلف د.امير حنا هرmez</li> <li>4- Probability and Statistics, by Morris, H. Degroot</li> </ol>
Recommended books and references (scientific journals, reports...)	<ol style="list-style-type: none"> <li>1- مقدمة في نظرية الإحصاء /المؤلف د.عبد الله توفيق الهلباوي</li> <li>2- SOME BASIC THEORY FOR STATISTICAL INFERENCE</li> </ol>

## Course Description Form **Applied Mathematics**

<b>1. Course Name:</b>	Applied Mathematics
<b>2. Semester / Year:</b>	annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*96 hours, (4 hours per week *24 per week)
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Dr. Hiba Rabeea Baanoon Email: hibabaanoon@uomisan.edu.iq
<b>7. Course Objectives</b>	
<b>Course Objectives</b>	<ol style="list-style-type: none"> <li>1. Understanding the Fundamental Concepts of Differential Equations: <ul style="list-style-type: none"> <li>• Definitions of power series, special functions of various types, Fourier series, and their transforms.</li> <li>• Solving integrals using the Gamma or Beta function.</li> <li>• Understanding the properties of power series, Fourier series, the Gamma function, the Beta function, Bessel functions, and Legendre functions.</li> </ul> </li> <li>2. Mastering Problem-Solving Skills: <ul style="list-style-type: none"> <li>• Analyzing complex problems and identifying their influencing factors.</li> <li>• Utilizing appropriate methods and techniques to solve problems.</li> <li>• Evaluating results and determining optimal solutions.</li> </ul> </li> <li>3. Developing Communication and Expression Skills: <ul style="list-style-type: none"> <li>• Explaining mathematical concepts clearly and accurately.</li> <li>• Using appropriate mathematical terminology when communicating with others.</li> </ul> </li> <li>4. Developing Teamwork Skills: <ul style="list-style-type: none"> <li>• Collaborating with classmates to solve problems and complete projects.</li> <li>• Exchanging ideas and information effectively.</li> <li>• Respecting others' opinions and cooperating to achieve common goals.</li> </ul> </li> <li>5. Raising Awareness of the Importance of Differential Equations in Various Fields: <ul style="list-style-type: none"> <li>• Understanding the role of differential equations in various scientific, technological, and engineering fields.</li> <li>• Applying differential equations to solve real-world problems in different fields.</li> <li>• Appreciating the achievements of mathematicians and their contributions to human civilization.</li> </ul> </li> <li>6. Cultivating a Love for Learning and Exploration: <ul style="list-style-type: none"> <li>• Arousing students' curiosity and love for learning.</li> <li>• Encouraging them to explore and innovate.</li> <li>• Developing a sense of accomplishment and satisfaction in themselves.</li> </ul> </li> </ol>
<b>8. Teaching and Learning Strategies</b>	

<b>Strategy</b>	<p><b>1-Active Learning:</b></p> <ul style="list-style-type: none"> <li>• <b>Project-Based Learning</b> :Assigning students research projects related to applied mathematics, such as: Solving specific exercises, researching problems that can be solved using special functions.</li> <li>• <b>Classroom Discussions:</b> Encouraging students to participate in discussions about the concepts of: Special functions, Fourier series and transforms.</li> <li>• <b>Inquiry:</b> Posing open-ended questions to students to stimulate their critical thinking and analysis of concepts.</li> </ul> <p><b>2-Use of Technology:</b></p> <ul style="list-style-type: none"> <li>• Distance learning: Providing access to distance learning through online educational platforms.</li> </ul> <p><b>3-Connecting Theory to Practice:</b></p> <ul style="list-style-type: none"> <li>• <b>Providing real-world examples:</b> Linking theoretical concepts to their applications in other fields such as: physics, engineering, and computer science.</li> </ul> <p><b>4-Assessment of Learning:</b></p> <ul style="list-style-type: none"> <li>• <b>Continuous assessment:</b> Using tools such as short quizzes, homework assignments, and participation in discussions to assess student progress.</li> <li>• <b>Final assessment:</b> Using comprehensive exams to assess student learning of the entire year's content.</li> </ul>
-----------------	---

## 9. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1 Week	4 Hours	Understanding How to Examine Regular and Singular Points of Power Series Convergence.	Solving Differential Equations Using the Power Series Method: Regular and Singular Points	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Learning How to Examine Regular and Irregular Singular Points, and the Point at Infinity for Power Series	Regular and Irregular Singular Points, and the Point at Infinity	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Learning the Solution Near a Regular Point	The Solution Near a Regular Point	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Learning the Solution Near a Regular Singular Point	The Solution Near a Regular Singular Point	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of

					concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Learning the Solution Near the Point at Infinity	The Solution Near the Point at Infinity	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Learning about the Gamma Function and its Applications in Finding Integrals.	Gamma Function	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Understanding the Beta Function, its Relationship with the Gamma Function, and its Applications in Evaluating Integrals.	Beta Function	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Understanding Bessel Functions and Bessel Recurrence Relations.	Bessel Functions	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding the Integral Formulas for Bessel Functions and Calculating their Integrals.	The Integral Formulas for Bessel	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding Legendre Functions and Legendre Polynomials.	Legendre Functions and Legendre Polynomials.	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding the	The Generating	Lecture and	Exams:

		Generating Function of Legendre Polynomials, Learning How to Derive Legendre Polynomials from it, and the Orthogonality of Legendre Polynomials.	Function of Legendre Polynomials and the Orthogonality of Legendre Polynomials.	Discussion	Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding Fourier Series, Distinguishing Even and Odd Functions, and Finding Fourier Series When Changing the Period.	Fourier Series	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding Fourier Series in Half-Range Sine and Cosine.	Fourier Series in Half-Range Sine and Cosine	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding the Complex Fourier Series.	Complex Fourier Series.	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding and Finding Fourier Integrals.	Fourier Integrals	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding and Finding Fourier Transforms.	Fourier Transforms.	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
1 Week	4 Hours	Understanding and Finding the Fourier Transform of Cosine and Sine.	Fourier Transform of Cosine and Sine.	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams

					to assess learning progress.
1 Week	4 Hours	Understanding the Fourier Transform Distribution Theorem.	Fourier Transform Distribution Theorem	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.
2 Weeks	8 Hours	Understanding the Applications of Fourier Transforms of Cosine and Sine.	Applications of Fourier Transforms of Cosine and Sine	Lecture and Discussion	Exams: Daily: Short quizzes to assess understanding of concepts. Monthly: Comprehensive exams to assess learning progress.

### 10. Course Evaluation

- 1- 50 Grade:
- Reports: 10 points
  - Daily Quizzes and Preparation: 5 points
  - Monthly Exams: 35 points
- 2- Final Exam: 50 points

### 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	طرق الرياضيات التطبيقية، باسل يعقوب يوسف، جامعة البصرة، 1989.
Main references (sources)	طرق الرياضيات التطبيقية، باسل يعقوب يوسف، جامعة البصرة، 1989.
Recommended books and references (scientific journals, reports...)	Advanced engineering mathematics, by E. Kreyszig 2011 .

## Course Description Form **Functional analysis**

<b>1. Course Name:</b>	Functional analysis				
<b>2. Semester / Year:</b>	annual				
<b>3. Description Preparation Date:</b>	2023-2024				
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department				
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*96 hours, (4 hours per week *24 per week)				
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Email:				
<b>7. Course Objectives</b>					
<b>Course Objectives</b>	<p>1. Review the tasks and concepts related to them and use them for topics that can be done.</p> <p>2- A detailed study of foam rubber spaces and their relationship with diagonal spaces, the multiplication of foam spaces, the diversity of functions in foam rubber spaces, the concept of the bound and bound set in foam rubber spaces.</p> <p>3- Topological space concepts on the metric and their study.</p> <p>4- Study of climate spaces (complete elastic spaces).</p> <p>5- Studying internal product spaces (examples and properties of going) and using them in studying Hilbert spaces</p> <p>6 - Obtaining standard spaces using known internal access spaces and showing that not all standard spaces can be derived from internal access spaces by proving the Cauchy-Schwartz inequality.</p> <p>7- Study of vectors and orthogonal (and unary) vectors and groups.</p>				
<b>8. Teaching and Learning Strategies</b>					
<b>Strategy</b>	<p>A- Cognitive objectives</p> <p>1) The student remembers the information and laws given in the course.</p> <p>2) That the student understands the course topics and related mathematical problems.</p> <p>3) The student should be able to apply what he has learned to solve mathematical problems.</p> <p>4) That the student is able to analyze the text of the question and arrange the information to benefit from it in the solution and obtain correct results.</p> <p>5) The student composes problems related to the course topics and then arrives at their correct solution.</p> <p>6) The student should have ideas about the course material and know how to devise appropriate laws to solve it.</p> <p>B - The skills objectives of the course</p> <p>1) The student must demonstrate the required mathematical laws related to the course vocabulary.</p> <p>2) The student should use the appropriate laws to solve each problem.</p> <p>3) The student must be proficient in linking topics that can be linked within the course vocabulary.</p> <p>4) The student should distinguish between the uses of theorems and laws during the solution.</p>				
<b>9. Course Structure</b>					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
2	8	The student	Vector spaces - subspaces - addition	Presentatio	Attendance

		learns what was presented in the lecture	and direct summation of subspaces - linear combination - independent and dependent groups - basis - linear transformations	n lecture and discussion	exams (daily and monthly)
3	12	The student learns what was presented in the lecture	Standard spaces (various examples that verify and examples that do not) Minkowski, Jordan-Holder, Cauchy-Joars inequalities and applications to them. The relationship of standard spaces to metric spaces	Presentatio n lecture and discussion	Attendance exams (daily and monthly)
2	8	The student learns what was presented in the lecture	Multiplication of standard spaces and their properties	Presentatio n lecture and discussion	Attendance exams (daily and monthly)
4	16	The student learns what was presented in the lecture	Generalizing topological concepts to standard spaces such as the sphere The open (closed) set, the open and closed set, and the closure of a set with examples, theorems, and applications And applications on Convex sets in standard spaces of convergent sequences )and sequences Divergent (and restricted sequences) with their basic properties and some applications	Presentatio n lecture and discussion	Attendance exams (daily and monthly)
3	12	The student learns what was presented in the lecture	Continuity, continuous functions and restricted functions with distinctions for each, properties of continuous functions in the case of functions being linear transformations, with applications of the relationship between continuous and restricted functions in the case of functions being linear transformations on normed spaces	Presentatio n lecture and discussion	Attendance exams (daily and monthly)
3	12	The student learns what was presented in the lecture	Banach spaces (examples that verify and examples that do not verify) with some theorems and a study of the condition for it to be a Banach-type division space	Presentatio n lecture and discussion	Attendance exams (daily and monthly)
3	12	The student learns what was presented in the lecture	Internal multiplication, internal product spaces, examples and notes, many properties related to the topic associated with linear transformation, examples and properties related to the concept in internal product spaces.	Presentatio n lecture and discussion	Attendance exams (daily and monthly)
3	12	The student learns what was presented in the lecture	The normed spaces created (resulting) from internal product spaces, and giving examples showing that not every standard space results from internal product, using some properties of internal product, proving the Cauchy-Joares inequality using the concept of internal product.	Presentatio n lecture and discussion	Attendance exams (daily and monthly)
3	12	The student learns what was presented in the lecture	Hilbert spaces (examples that are valid and examples that are not). Investigate the relationship between Hilbert space and Banach space and give examples of Banach spaces but not Hilbert spaces.	Presentatio n lecture and discussion	Attendance exams (daily and monthly)
4	16	The student learns what was presented in the lecture	Groups Orthogonal groups (and mono-orthogonal groups) in internal product spaces - complementary groups (definitions, examples and properties) Bessel's theorem	Presentatio n lecture and discussion	Attendance exams (daily and monthly)

## 10. Course Evaluation

- 1- Semi-daily and monthly tests and surprise exams.
- 2- Divide the class into several groups, give each group various exercises, and make the process of evaluating answers mutual between the students.
- 3- Close follow-up on solving chapter questions and paying attention to the process of writing simple reports on any valuable information or an outstanding mathematician.

## 11. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Introduction to mathematical statistics, by Hogg and Craig.
Main references (sources)	1- مقدمة في نظرية الإحصاء /المؤلف د.عبد الله توفيق الهلباوي 2- الاستدلال الإحصائي/المؤلف د.جلال مصطفى الصياد

## Course Description Form **practical education**

<b>1. Course Name:</b>	practical education
<b>2. Semester / Year:</b>	annual
<b>3. Description Preparation Date:</b>	2023-2024
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*72 hours, (3 hours per week *24 per week)
<b>6. Course administrator's name (mention all, if more than one name)</b>	Name: Email:
<b>7. Course Objectives</b>	
<b>Course Objectives</b>	<ol style="list-style-type: none"> <li>1. Review everything related to the components of the curriculum (goals, content, and teaching methods).</li> <li>2. Introducing the ABCs of teaching.</li> <li>3. Introducing them to the personal and professional specifications of a successful teacher.</li> <li>4. Introducing them to the ethics of the teaching profession.</li> <li>5. Training them through workshops on the skill of analyzing mathematical knowledge and evaluating content.</li> <li>6. Training them through workshops on using teaching skills.</li> <li>7. Training them to prepare a daily plan for mathematics lessons.</li> <li>8. Train them to prepare and present a video lecture using different teaching strategies.</li> <li>9. Individual application</li> </ol>

## Course Description Form **Measurement and Evaluation**

<b>1. Course Name:</b>	Measurement and Evaluation				
<b>2. Semester / Year:</b>	annual				
<b>3. Description Preparation Date:</b>	2023-2024				
<b>4. Available Attendance Forms:</b>	Lectures are delivered to students in person according to the schedule announced in the department				
<b>5. Number of Credit Hours (Total) / Number of Units (Total)</b>	*48 hours, (2 hours per week *24 per week)				
<b>6. Course administrator's name (mention all, if more than one)</b>	Name: Email:				
<b>7. Course Objectives</b>					
<b>Course Objectives</b>	<p>Introducing the mathematics student to the basic concepts and terminology in measurement and evaluation and their role in the educational process.</p> <ul style="list-style-type: none"> <li>- Introducing the student teacher to educational competencies, how to set cognitive, affective, and psychomotor goals, setting standardized test and testing questions, interpreting their results, and using them as feedback.</li> <li>- Training them through flipped learning on the skill of analyzing mathematical knowledge and evaluating content.</li> <li>- Training them through flipped learning to use teaching skills.</li> </ul>				
<b>8. Teaching and Learning Strategies</b>					
<b>Strategy</b>	<ul style="list-style-type: none"> <li>- Clarifying the role of the teacher in the evaluation process in achievement tests and their various types, essay/objective/performance, indicating the methods of constructing them and diagnosing the most important weaknesses and strengths in them through their application, along with indicating the most important methods for treating them and improving their use.</li> <li>- Introducing students to the most important steps in formulating test items according to their own guidelines, while specifying the most important criteria for selecting them by constructing a table of specifications that balances behavioral objectives and academic content to achieve the validity of the required good test by conducting various exploratory experiments to reach the approved basic experiment.</li> <li>-Introducing students to the most important specifications of a good test, including its types and how to apply it</li> <li>- Clarifying the role of the teacher in the evaluation process in achievement tests and their various types, essay/objective/performance, indicating the methods of constructing them and diagnosing the most important weaknesses and strengths in them through their application, along with indicating the most important methods for treating them and improving their use.</li> <li>- Introducing students to the most important steps in formulating test items according to their own guidelines, while specifying the most important criteria for selecting them by constructing a table of specifications that balances behavioral objectives and academic content to achieve the validity of the required good test by conducting various exploratory experiments to reach the approved basic experiment.</li> <li>-Introducing students to the most important specifications of a good test, including its types and how to apply it</li> </ul>				
<b>9. Course Structure</b>					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1 + 2	4 Hours	Understanding How to Examine Regular	1- Objectives of measurement and evaluation / concept / meaning / test / types of measurement and types of evaluation 2- The characteristics or nature of psychological or educational measurement and the relationship between measurement, evaluation and testing 3-Methods of assessment, types of assessment	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.

			according to time frame A- Preliminary B- Formative C- Diagnostic D- Final		
3 - 5	4 Hours	Understanding How to Examine Regular	1- Classification of tests according to the results A - Standardized reference tests B - Standardized reference tests 2- Questions for self-evaluation 3- Determine general goals and behavioral objectives	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.
6 +7	4 Hours	Understanding How to Examine Regular	Content analysis.	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.
8 – 13	8 Hours	Understanding How to Examine Regular	Building a table of specifications and its importance in the educational process by designing a test map that includes, in two columns, the content of the academic subject and behavioral patterns according to Bloom's levels in the cognitive field.	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.
14 +15	4 Hours	Understanding How to Examine Regular	-Oral tests meaning and concept / identifying strengths and weaknesses and ways to improve them 2-Essay tests on meaning and concept/free and restricted types / Identifying strengths and weaknesses / Methods of preparing or drafting its paragraphs and suggestions for improving the tests 3- Objective tests, meaning and concept / Identifying the advantages and disadvantages and ways of drafting their paragraphs / Methods of correcting the tests and their types 4- A- True and false tests Meaning and concept / Advantages and disadvantages and preparing the wording of the paragraphs B- Tests Complementing the meaning and concept, identifying advantages and disadvantages, and preparing and drafting paragraphs	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.
15 – 18	8 Hours	Understanding How to Examine Regular	Applying flipped learning by discussing student reports on the subject	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.
19-22	8 Hours	Understanding How to Examine Regular	- Introducing students to statistical analysis of achievement test items and extracting their psychometric properties from ease/difficulty/distinctiveness of the item/effectiveness of incorrect alternatives. Detect guessing in the answer	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.
23-25	8 Hours	Understanding How to Examine Regular	- Defining the meaning and concept of achievement tests - Introducing students to the specifications of a good test a. Honesty, its types, and methods for finding it using laws and statistical methods B. Reliability, its types, and different methods of finding it using special statistical methods C- Objectivity and its meaning.	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.
26+27	4 Hours	Understanding How to Examine Regular	-Observation, meaning and concept/types of observation and tools B - Observation, advantages and disadvantages. C - Interview meaning and concept / Types of interviews and advantages and disadvantages of the interview	Lecture and Discussion	Daily activities, discussions and exams to assess learning progress.
28	4 Hours	Understanding How to Examine Regular	School card Contents of the card	Lecture and Discussion	Daily activities, discussions and exams to assess learning

29+30	4 Hours	Understanding How to Examine Regular	Uses of measurement in the evaluation process	Lecture and Discussion	progress. Daily activities, discussions and exams to assess learning progress.
